AND SPLITTERS**

About Pepperl+Fuchs

Pepperl+Fuchs is a leading developer and manufacturer of electronic sensors and components for the global automation market. For more than 60 years, our continuous innovation, high quality products, and steady growth has guaranteed us continued success.

One Company – Two Divisions

PEPPERL+FUCHS – SENSING YOUR NEEDS

The main target markets of the **Factory Automation Division** are machine and plant construction, the automotive industry, storage and material handling, printing and paper industry, packaging technology, process equipment, door, gate and elevator construction, mobile equipment, renewable energies. With the invention of the inductive proximity sensor in 1958, the company set an important milestone in the development of automation technology. Under the motto “Sensing your needs”, customers benefit from tailor-made sensor solutions for factory automation. The division offers a wide product range of industrial sensors whether it’s inductive, photoelectric or ultrasonic sensors, rotary encoders, identification systems, barcodes, code readers for data-matrix-codes and vision sensors.

PEPPERL+FUCHS – PROTECTING YOUR PROCESS

The **Process Automation Division** is a market leader in intrinsically safe explosion protection. We offer comprehensive, application-oriented system solutions, including customer-specific control cabinet solutions for the process industry. A large portfolio of components is available from our various product lines: isolated barriers, fieldbus infrastructure solutions, remote I/O systems, HART interface solutions, level measurement devices, purge and pressurization systems, industrial monitors and HMI solutions, power supplies, separator alarm systems for oil and petrol separators, signaling equipment, lighting as well as emergency shutdown equipment and accessories.

WORLDWIDE PRESENCE IN 33 COUNTRIES

Twinsburg ●

● Mannheim

● Singapur

THE THREE CENTERS OF EXCELLENCE ARE THE FOCAL POINTS OF THE GLOBAL PRESENCE OF PEPPERL+FUCHS

Mannheim

Mannheim is the traditional headquarters of Pepperl+Fuchs and the center of excellence focusing on engineering. More than 800 specialists support the activities of this principal Pepperl+Fuchs location.

Twinsburg

Since 1983, Twinsburg/Ohio has been the headquarters for the American market. 250 employees on site develop specific solutions for the American customers of Pepperl+Fuchs.

Singapore

More than 700 employees are engaged in the Singapore center of excellence of Pepperl+Fuchs. Since 1979, all activities associated with the Asiatic economic area have been controlled from Singapore. This region is becoming of increasing importance due to the growth market in China.

The global presence of Pepperl+Fuchs:

- Technology centers with their own development groups in Berlin, Tuttlingen and Sulbiate/Italy offer customers specific solutions. Furthermore the locations operate highly flexible production in small batch sizes.
- The production facilities in Hungary and Indonesia are equipped for series production in large quantities.
- The worldwide sales network guarantees that we are close to our customers and enforces Pepperl+Fuchs to react swiftly and competently to customer requirements. You are in need of contact addresses of our sales partners? Please try the internet at www.pepperl-fuchs.com/company/presence.

Pepperl+Fuchs - Your Expert Partner

Pepperl+Fuchs is one of the world's leading manufacturers of industrial sensors and sensor systems. We also provide a comprehensive range of connectors and junction blocks for machine and plant installations. Each product is designed to be an optimum solution for specific application conditions.

Our ISO 9001 certification ensures that our products meet the highest standards of quality and are a reliable source for your application.

Sales offices in all industrial markets throughout the world make Pepperl+Fuchs the ideal partner for all global players in factory automation. Through knowledgeable contacts, we offer you first-class service anywhere in the world. Our on-site staff use their extensive knowledge of products and applications to best meet your needs.

Always the right connection

Pepperl+Fuchs stands for innovation and close cooperation with its customers. As the "inventor of the proximity switch" we have been expanding the boundaries for more than 50 years, always leading the way with new market developments. Our success is based on knowing and understanding our target industries and the needs of our customers. For this reason, we are the expert contact for our customers when they are looking for new solutions. We can provide brand-new theories product concepts to solve complex challenges. We always aim to add technical and commercial value.

We are successful because we provide valuable technical assistance, offer a comprehensive range of products and are flexible when it comes to putting new ideas and concepts into practice. Whether it involves innovative technical solutions or providing support, we will always find the right solution based on our extensive experience, product line, manufacturing, and application know-how. Choose the RIGHT CONNECTION and contact us today!

Visit us online at

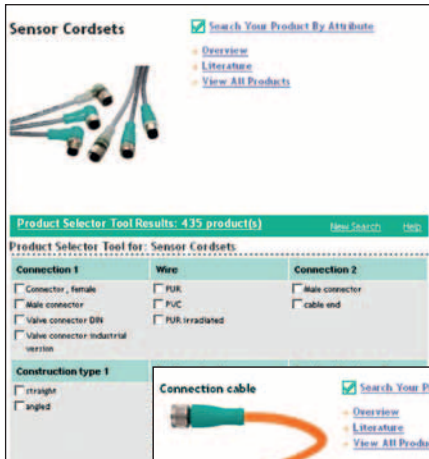

www.pepperl-fuchs.com

Our website contains everything you need to know about Pepperl+Fuchs products and services as well as numerous application examples.

Expert Service

We are happy to answer any questions you have regarding connection technology.

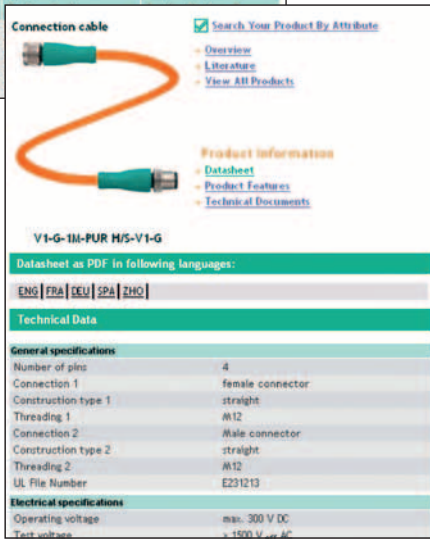

Online Product Selector

The online product selector helps you to select the right item from our wide range of connectors.

Simply choose the necessary technical features for an overview of all products that correspond to your request. The more precise you are when specifying the product, the more accurate the results will be.

Here you will not only find all technical information but also CAD drawings and approvals.

Customer-Specific Solutions

We always listen to our customers' needs and strive to provide the best solution. Sometimes this is only possible with a customized product. Regardless of whether it is a matter of simple assembling, complete cable assemblies, or customer-specific developments:

We offer tailor-made solutions for your application!

With our expertise in tool manufacturing, injection-molding technology, metal processing, electronic engineering, and assembling, we are perfectly positioned to quickly provide the product that's best for your specific application. We assure the highest standards through the qualification and approval of our products to international standards by test programs implemented by our own testing laboratory.

Our services:

- Advice
- Development/construction
- Tool manufacturing
- Assembly
- Custom design
- Preassembly

Ordering Made Easy

Choosing and ordering the right product for your application is quite simple. From the table of contents, go directly to the desired subchapter. Here you will find an overview of all the models listed in this chapter. On the chosen catalogue page, configure your product using our type code. For example, just select the desired cable material and length, then enter these into the empty space on the type code – your order code is complete.

Tip:
If you are unsure about which type of cable you need for your application, you can find a description of the types of cable and the relevant applications in the “The Correct Cable for Every Application” on page 10.

As you can see from the image above, the correct order code is:
V1-G-1M-PUR H/S-V1-G

Highest Standards of Quality

For us, quality primarily means customer satisfaction. With this in mind, all business processes are geared towards customer satisfaction, be it in the form of the qualification and manufacture of our products or providing expert advice. This is maintained through quality management according to DIN EN ISO 9001:2000.

Our products are qualified in the Pepperl+Fuchs testing laboratory with regard to the relevant European standards and directives as well as the specifications provided. In addition, certain products must also meet our even more stringent in-house standards. Our measurement and test equipment meets stringent quality standards and is constantly being updated to comply with the latest standards.

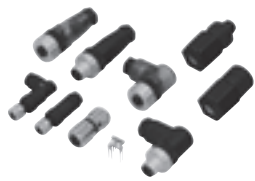

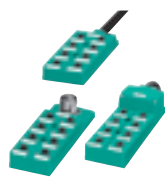

In our **production facility in Hungary**, modern production standards and 100% functional testing of every product ensure zero tolerance for defects and the highest levels of functional safety. An automated 4-point testing program of all connectors guarantees this zero-defect test commitment:

- Short-circuit detection across all internal strands against each other
- Testing of series resistance
- Load test with 4 A per lead
- LED test
- High voltage test

Under the key word "LEAN production," our production processes are constantly being inspected and refined. We focus not just on quality but also on the cycle time and flexibility of our processes. Only in this way can short delivery times and a large range of products be maintained.

Product Diversity – Always the Right Connection

Pepperl+Fuchs offers a comprehensive range of sensor-actuator cables for machine and plant installations. In addition to the common M8, M12, and valve connector designs, ready-made 1/2" and 7/8" connectors are also available in stock as standard. Our recently introduced "LEAN Production" philosophy will enable us to manufacture and deliver customized versions with short delivery times.

The choice of cable product often depends on the application requirements or user standards.

Our range includes:

- Shielded versions
- A version with stainless-steel coupling nut
- Versions with indicators for operation and function.

In conjunction with our wide range of cable types, these options mean that we can provide the optimum solution for virtually any application.

The New Generation – Connectors with Impressive Properties

- Optimized size and a rounded body designed for a secure grip enable the connector to be used in the tightest of spaces
- Gold-plated, machined contacts ensure contact resistances < 5 mΩ
- Halogen-free PUR leads prevent toxic vapors being released in the event of a fire
- The knurled nut enables a torque wrench to be used to securely tighten our connectors
- Highly effective integrated vibration protection

Your Benefits at a Glance

- Flexibility – we are happy to customize our products to your specifications
- Shortest delivery times – even for customized products
- Quality – exhaustive functional testing of all connectors
- Products are approved for the American market – 
- Reliably sealed to IP67 or higher

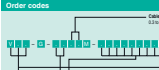

Our Type Code – Your Order Code

Simply use our type code to order the product you desire with a minimum of fuss. We'll show you how!

For example, just select the desired cable material and enter this into the empty space on the type code – your order code is complete.

The Correct Cable for Every Application

Choosing the right cable is crucial in terms of the service life you can expect from a sensor-actuator cable. This is why it pays to familiarize yourself with our extensive range of cables. It will save you time as well as money!

PVC – for straightforward applications

Application areas:

For use in areas subject to moderate mechanical strain, e.g., packaging machines, assembly and production lines.

- Affordable cable quality
- Effective resistance to chemicals
- Suitable for the food industry

Features:

- Easily strippable
- Excellent flame retardance
- Suitable for flexible installation to some extent
- Limited resistance to oil and lubricant

Temperature range

- Permanently installed –25 °C ... 70 °C
- 25 °C ... 105 °C for indicated cable types
- Non-fixed –5 °C ... 70 °C
- Minimum bend radius 10 x D

Cable types

Cable type	Structure	Diameter	Use
PVC, gray	3/4/5 x 0.34 mm ² (19 x 0.15 mm)	D = 4.8 mm	M12
	3/4 x 0.25 mm ² (14 x 0.15 mm)	D = 4.3 mm	M8
PVC, blue (NAMUR)	2/4 x 0.34 mm ² (19 x 0.15 mm)	D = 4.8 mm	M8 / M12
PVC, black	2+1/3+1/4+1 x 0.5 mm ² (16 x 0.2 mm)	D = 5.1 mm/5.7 mm/6.6 mm	Valve connectors
PVC-U, black 	3/4 x 0.34 mm ² (19 x 0.15 mm)	D = 4.3 mm	M8 / M12
PVC-U, yellow 	3/4 x 0.34 mm ² (19 x 0.15 mm)	D = 4.3 mm	M8 / M12
PVC-U, yellow, 105 °C 	3/4/5 x 0.34 mm ² (42 x 0.1 mm)	D = 5.2 mm/5.5 mm/5.9 mm	1/2"

PUR/PVC – for more exacting specifications

Application areas:

This cable is suitable for situations where it is exposed to a high level of mechanical stress, e.g., with machine tools or production processes involving removal of metal.

- High abrasion resistance
- Effective resistance to chemicals
- Effective resistance to oil
- Suitable for flexible installation

Features

- Easily strippable
- Resistant to microbes and hydrolysis
- UV-resistant

Temperature range

Permanently installed –25 °C ... 80 °C

Non-fixed –5 °C ... 80 °C

Minimum bend radius 10 x D

Cable types

Cable type	Structure	Diameter	Use
PUR, black	2+1/3+1/4+1 x 0.5 mm ² (16 x 0.2 mm)	D = 5.7 mm/6.0 mm/6.5 mm	Valve connectors

PUR – for complex applications

Application areas:

Suitable for long-term flexible use in the most challenging of environments such as with machine tools, rotary tables and swivel tables. Shielded versions available to meet additional EMC requirements.

- **Halogen-free**
- **Capable of withstanding a high level of mechanical stress**
- **Effective resistance to chemicals**
- **Effective resistance to oil**
- **UL cable types are extremely flame-retardant**

Features:

- Free from silicone and substances that inhibit lacquer adhesion
- Resistant to microbes and hydrolysis
- UV-resistant

Temperature range

Permanently installed –40 °C ... 80 °C
 Non-fixed –20 °C ... 80 °C
 Minimum bend radius 10 x D

Additional data for UL-approved cable types (unshielded):

Min. no. of bend cycles 5 million
 Distance 5 m
 Acceleration 5 m/s²
 Speed 3.33 m/s
 Torsion ±180°/m tested at 20 °C ... 25 °C

Cable types

Cable type	Structure	Diameter	Use
PUR, gray	3/4/5 x 0.34 mm ² (19 x 0.15 mm)	D = 4.8 mm	M12
	3/4 x 0.25 mm ² (14 x 0.15 mm)	D = 4.3 mm	M8
PUR, blue (NAMUR)	2/4 x 0.34 mm ² (19 x 0.15 mm)	D = 4.8 mm	M8 / M12
PUR-U, black 	8 x 0.25 mm ² (14 x 0.15 mm)	D = 6.0 mm	M12
	2+1/4+1 x 0.5 mm ² (28 x 0.15 mm)	D = 4.8 mm/5.5 mm	Valve connectors
	3/4 x 0.34 mm ² (42 x 0.1 mm)	D = 4.3 mm	M8 / M12
PUR-U/ABG, black, shielded 	8 x 0.25 mm ² (14 x 0.15 mm)	D = 6.0 mm	M12
PUR-ABG, gray, shielded	4/5 x 0.34 mm ² (19 x 0.15 mm)	D = 4.8 mm	M8 / M12
PUR-U, yellow 	4 x 0.34 mm ² (42 x 0.1 mm)	D = 4.3 mm	M8 / M12
PUR-U/0.75, black 	5 x 0.75 mm ² (42 x 0.15 mm)	D = 6.0mm	M12

Irradiated PUR – for extreme applications

Application areas:

This cable boasts properties that are better than those of conventional PUR cables, making this highly-flexible control cable also suitable for use in robot applications and particularly with welding robots.

- **Welding bead resistant**
- **Resistant to high temperatures**
- **Capable of withstanding mechanical stress**
- **Robot-compatible**
- **Halogen-free**
- **Excellent flame retardance**

Features:

- Effective resistance to oil
- Effective resistance to chemicals
- UV-resistant
- Free from silicone and substances that inhibit lacquer adhesion
- Resistant to microbes and hydrolysis

Temperature range

Permanently installed	-50 °C ... 105 °C	
	-50 °C ... 80 °C	for UL cable types
Non-fixed	-40 °C ... 105 °C	
	-40 °C ... 80 °C	for UL cable types

Minimum bend radius 10 x D

Min. no. of bend cycles 5 million

Distance	10 m
Acceleration	10 m/s ²
Speed	3 m/s
Torsion	Torsion ±360°/m tested at 20 °C ... 25 °C

Cable types

Cable type	Structure	Diameter	Use
PUR H/S, orange	4 x 0.34 mm ² (19 x 0.15 mm)	D = 4.8 mm	M8 / M12
PUR H/S, yellow 	3/4/5 x 0.75 mm ² (42 x 0.15 mm)	D = 5.8 mm	1/2"

POC welding bead resistant – for the most challenging scenarios

Application areas:

This special cable comes into its own for applications in the welding sector that cannot be solved with irradiated PUR cables.

- **Welding bead resistant**
- **Resistant to high temperatures**
- **Capable of withstanding mechanical stress**
- **Robot-compatible**
- **Excellent flame retardance**

Features:

- Effective resistance to oil
- Effective resistance to chemicals
- UV-resistant
- Free from silicone and substances that inhibit lacquer adhesion
- Resistant to microbes and hydrolysis

Temperature range

- Permanently installed –40 °C ... 150 °C
- Non-fixed –15 °C ... 150 °C
- Minimum bend radius 10 x D
- Torsion ±360°/m tested at 20 °C ... 25 °C

Cable types

Cable type	Structure	Diameter	Use
POC, orange	4 x 0.34 mm ² (19 x 0.15 mm)	D = 4.8 mm	M8 / M12

STOOW – THE cable for the American market

Application areas:

This type of cable uses an extremely resilient PVC mixture that is used predominantly in the American market.

- Extremely resilient PVC mixture acc. to STOOW-A
- Tried and tested for outdoor use
- Approved up to 600 V
- Excellent flame retardance

Features:

- Effective resistance to oil
- Effective resistance to chemicals

Temperature range

Permanently installed -25 °C ... 105 °C

Non-fixed -5 °C ... 105 °C

Minimum bend radius 10 x D

Cable types

Cable type	Structure	Diameter	Use
STOOW, yellow	3/4/5 x AWG16 (~1.25 mm ² , 19 x 0.29 mm)	D = 9.9 mm/10.7 mm/12.9 mm	7/8"

Instructions on Connecting and Routing Cables

Avoid common mistakes when connecting and routing cables

Properly connecting, routing, and maintaining cable systems is the best way to ensure their reliability and long service life.

Bending radius

By using an appropriate bending radius you can reduce the tensions that arise from bending, and extend the cable's service life.

Recommended flexible installation

Recommended fixed installation

Bundling

When individual cables are connected to a device and when securing cables together, take care to avoid deforming the cables with the cable ties. When cables are secured correctly it should be possible to move them easily and without using much force; this will extend their service life.

Correct bundling

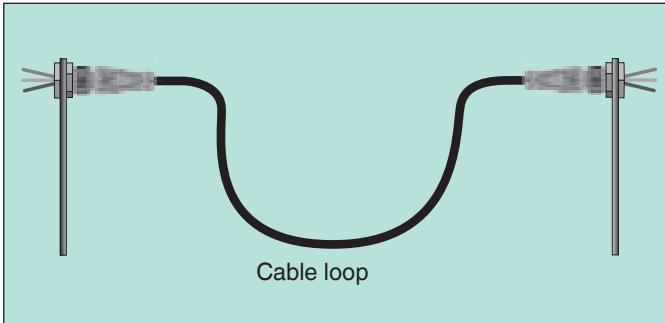

Incorrect bundling

Cable ties that are too tight should be loosened, and those that are too slack should be tightened

Connecting cables to portable devices

Connecting cables that are subject to movement between two points must be long enough to avoid excessive strain on the cables and connectors. In this situation it is advisable to form loops in the cable and route sections in the shape of the letter C.

Strains

If a sufficiently large loop is formed at connection points, then excessive wear and common problems due to the strains illustrated below can be avoided. Pepperl+Fuchs connecting cables feature rugged, pre-fitted easy-grip body. If these are combined with correctly formed loops, the result is that both connector and cable are relieved very effectively of strain.

Correct strain relief loop

Incorrect strain relief loop

Recommended: Routing inside corner

Routing the cable round the outside of a corner is not recommended

Product Diversity – Always The Right Connection

If different lengths of cable are required during field wiring, then these are generally cut to length and assembled on-site. The ability to install them quickly yet simultaneously ensuring a quality is paramount.

Pepperl+Fuchs provides a wide range of ready made connectors for this very purpose:

- M8
- M12
- Valve connectors
- RD24
- M18
- 1/2"
- 7/8"

These connectors are available in both straight and angled designs with socket and pin contacts with various connection points.

Depending on the application, different connection technology can be used for M8 and M12 connectors. Shielded versions with a metal housing are available to meet additional EMC requirements.

The Connection Technology – Conventional or Innovative

M8/M12 Screw Connection

Classic connection technology, the screw connection, provides a secure and reliable contact for a range of wire gauges.

M8 MiniQuick

Connecting the relatively small M8 to screw terminals is often quite time-consuming. The MiniQuick version solves the problem by forming an axial contact between the connector pin and the conductor strands. This saves time by avoiding the need to strip the insulation from each conductor.

M12 Quickon

Quickon quick connection technology provides an inexpensive and easy connection solution without having to strip the insulation. Using insulation displacement technology, the contact pierces the cable insulation and creates a vibration-proof and airtight contact.

Sensor-actuator cable

Field-attachable connectors

Junction blocks

Sensor-actuator splitters

Sensor-actuator receptacles

Data connectors

Shielded M12 with Iris Springs

Iris spring shielding greatly simplifies the manufacture of field attachable shielded cables. The cable shield only has to be cut to a defined length before being slid over the cable jacket to the required position. The iris spring ensures the contact between the shield and the connector housing.

Your Benefits at a Glance

- Wide product range – assemble quickly and reliably on-site
- Different connection possibilities – the ideal solution for every application
- Shortest delivery times – available in stock as standard
- Quality – reliably sealed to IP67 or higher

Our Type Code – Your Order Code

Simply use our type code to order the product you desire with a minimum of fuss. We'll show you how!

For example, just select the desired number of pins and cable outlet, then enter these into the empty space on the type code – your order code is complete!

Example

You need the following M12 connector:

- M12 socket, straight, screw connection
- 4-pin
- PG9 cable gland with cable diameter of 6 to 8 mm

M12 x 1 female connectors, screw terminal connection

Technical data	4	5	8
Number of pins	4	5	8

Product Diversity – Always The Right Connection

Passive splitter systems are frequently used in decentralized field installations to prevent the need for cable harnesses where several sensors and actuators are located in tight spaces. Expensive and time-consuming parallel wiring to a terminal box is replaced by a single master cable that carries both the supply voltage and signal lines. Assembly and installation times, not to mention financial costs, are reduced as a result.

Sensors and actuators can be easily connected on-site using preassembled cables. LED indicators signal the status of the supply voltage and signals. This considerably simplifies the process of troubleshooting faults. Thanks to the modular design, components can be replaced quickly and easily.

Our product range includes M8 and M12 junction blocks with four, six and eight ports. By using double allocation ports, up to 16 sensors or actuators can be connected to the controller. The fully encapsulated M12 junction blocks, extremely robust and watertight, are suitable for even the harshest of application conditions. For restricted installation locations we provide our light and compact M8 splitter.

Different Connection Technologies – for Flexibility when Connecting

Choosing the best connection technology depends on the intended application, and on your personal preferences or standards.

Junction Blocks with Molded Master Cable

If the ease of installation process top priority, then the junction blocks with a molded master cable are the logical choice. Cut the master cable the required length and wire into the terminal box. Since the master cable can be supplied in any length, Pepperl+Fuchs offers the best product for every application.

Junction Blocks with Plug-In Connection

If modularity is the overriding factor, then junction blocks with a plug-in connection is the best solution. If a module needs to be replaced, just unplug the connectors and plug-in a new junction block. The M12 or M23 connector master cables can also be ordered in different lengths.

Junction Blocks with Terminal Compartment

The master cables are sometimes routed in the plant in advance, with the junction blocks being connected at a later date. In this instance a junction block with a terminal compartment is the correct solution.

Your Benefits at a Glance

- Wide range – the right product for every need
- Different connection technologies – flexibility when connecting
- Shortest delivery times – available in stock as standard
- Quality – reliably sealed to IP67 or higher

Our Type Code – Your Order Code

Simply use our type code to order the product you desire with a minimum of fuss. We'll show you how!

For example, just select the desired sensor count/type allocation and cable length and enter this into the empty space on the type code – your order code is complete.

Junction blocks, M12, with master cable

Technical data	
Number of ports	4, 5
Display/indicator	Green LED
Technical LED	IO status indicator
Mechanical data	
Operating voltage U _o	24 V AC rms, 24 V DC
Operating current	≤ 0.5 A per channel display element
Current loading	≤ 2 A per channel, ≤ 4.0 A per block, ≤ 12 A total current per block
Ambient conditions	
Ambient temperature	-25...75 °C for housing, Cable length: 0...100 °C, Cable lead: -40...80 °C
Mechanical data	
Degree of protection	IP67/IP69
Construction	Cable attached with socket, M12 x 1
Material	Aluminum
Color	Green
Contact surface	NiAu
Housing	PA, green
Cable	PUR, shield
Splicing	Signal line: 0.24 mm ² , Supply line: PE 0.75 mm ²
Mounting radius	> 15 mm diameter

Features

- Flat structure
- LED indicator for module supply and IO status

Electrical connection

Sensor-actuator receptacles

Data connectors

Product Diversity – Always The Right Connection

There are thousands of sensors and actuators in complex production plants, where the signals must be collected and transmitted to the controller. For this reason, junction block systems are frequently used in decentralized field installations to minimize wiring and save time and money.

Double allocation sensor-actuator boxes have another advantage for many sensors that are installed in tight spaces. These can collect two signals per slot and transmit them to the controller. In this case solid molded Y splitters or flexible cabled Y splitters are used.

Another application that occurs frequently is the looping-through of the power supply and signals from one device to the next. This type of application is useful, for example, for cascaded systems such as congested track scanners for roller conveyors. In this case, junction blocks are used with a 1:1 connection.

Nonstandard cases can also be solved easily by combining virtually any M8 and M12 connection system with an associated internal interface circuit. Do not hesitate to get in touch with us. We'll be sure to find the right solution together!

Your Benefits at a Glance

- **Cost-saving – save yourself the cost of additional junction blocks**
- **Flexibility – we are happy to customize our products to your specifications**
- **Shortest delivery times – even for customized products**
- **Quality – 100 % functional testing**
- **Reliably sealed to IP67 or higher**

Y-splitter cordsets, M12 - M12

Technical data	
Number of pins	4 (pin 2+4 bridged)
Electrical data	
Operating voltage U ₀	Max. 250 V AC/DC
Operating current	Max. 4 A
Maximum resistance	< 1 kΩ
Ambient conditions	
Ambient temperature	-40 ... 80 °C, humid
Operating temperature	-30 ... 50 °C, non-humid
Humidity	5
Degree of protection	IP67 / IP68 / IP69K
Construction	1 x M12 plug, 2 x M12 socket
Material	Cable
Conductive surface	NiCu
Features	
Efficiently combines two signals onto one M12 plug	
Vibration protection	
Dimensions	
Body	TPU
Cable jacket	Stainless steel braided
Cable	PUR
Shield diameter	6.4 mm
Shielding value	< 10 dB cable diameter flexible
Strands	0.34 mm ²

Our Type Code – Your Order Code

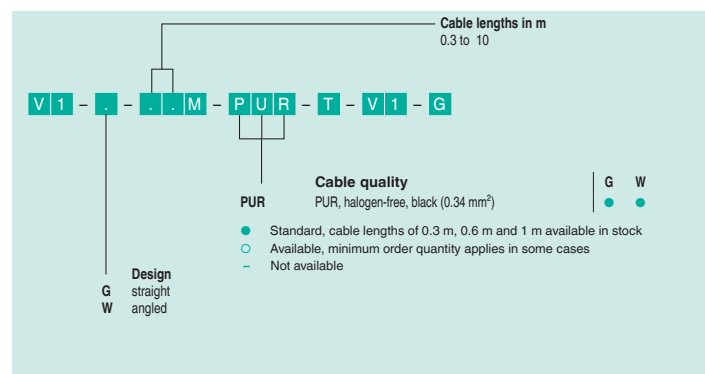

Simply use our type code to order the product you desire with a minimum of fuss. We'll show you how!

For example, just select the desired connector combination, cable length, and cable type and enter this into the empty space on the type code – your order code is complete.

Example

You wish to order the following sensor-actuator splitter:

- M12 plug straight/2x M12 socket straight (pin 2+4 bridged)
- Halogen-free polyurethane cable
- 1 m cable length

As you can see from the image above, the correct order code is:
V1-G-1M-PUR-T-V1-G

Sensor-actuator cable

Field-attachable connectors

Product Diversity – Always The Right Connection

With technology for connecting devices, the key issues are straightforward integration in the housing concept and therefore cost-effective manufacture of the end devices. Depending on the requirement for the interface, the receptacles

- M8
- M12
- 7/8"

are typically used.

Pepperl+Fuchs offers you a wide range of receptacles in metal housings, with different numbers of pins, and different mounting threads. In addition, several types of mounting are available so there is the right solution for every housing concept!

Types of mounting – the right one for every housing concept

Front panel mounting

In this type of mounting, the plug-in connector from the outside of the device is screwed in. If the minimum thickness of the wall falls below 3 mm, it can easily be countered with a thin nut. The mounting thread is flattened on two sides to provide anti-rotation protection. The mounting cutout only needs to be adjusted. This type of mounting is available with M16 and PG9 mounting threads.

Front panel mounting, adjustable position

Sometimes, it is necessary to ensure that the plug-in connectors have a defined alignment. In this case, front panel mounting with an adjustable position is the right choice. The plug-in connectors from the outside of the device are screwed in easily and put in the right position. This is then countered by using the pre-mounted fastening nut. This type of mounting is available with M16 and PG9 mounting threads.

Junction blocks

Sensor-actuator splitters

Sensor-actuator receptacles

Data connectors

Rear panel mounting

In some cases, through-the-wall interface connections are required. For this reason, plug-in receptacles are available for through mounting. These are positioned from the inside of the cabinet or enclosure through the mounting cutout and fastened using a nut on the outside of the device. By adjusting the mounting cutout, anti-rotation protection can be implemented using the flattened thread.

Your Benefits at a Glance

- Wide range – the right product for every need
- Different types of mounting – the right one for every housing concept
- Shortest delivery times – available in stock as standard
- Quality – reliably sealed to IP67 or higher

Our Type Code – Your Order Code

Simply use our type code to order the product you desire with a minimum of fuss. We'll show you how!

For example, just select the desired number of pins and the desired mounting thread, then enter these into the empty space on the type code – your order code is complete!

Product Diversity – Always The Right Connection

With the decentralization of production plants and the high demand for exchanging data and information quickly, a range of standardized data interfaces is currently used for production control. However, all these interfaces share one common theme – the components used must be suitable for the harsh conditions awaiting them in industrial applications.

Pepperl+Fuchs provides industry-grade components boasting an IP67 protection rating for all current fieldbuses and industrial Ethernets. Designed primarily for field applications, our array of products range from ready-made cables and field attachable connectors to device connections.

All components are manufactured in accordance with the guidelines of the fieldbus user organizations. This ensures optimum performance in the application.

Industrial Ethernet

The needs of industrial Ethernet are met with ready-made and field attachable M12 and RJ45 components that are designed to withstand the extreme stresses of humidity, temperature, vibrations and electromagnetic interference present in industrial applications.

These carry an IP67 protection rating, EMC protection, and an anti-vibration connection. Twisted-pair cables with a braided shield ensure that the components comply with the specified communication standard. The PUR outer sheath offers high mechanical and abrasion resistance and will withstand even the harshest of ambient conditions.

All components conform to CAT5 acc. to IEC 11801:2002.

PROFIBUS, CANopen, DeviceNet

Conventional PROFIBUS, CANopen and DeviceNet bus structures allow nodes to be connected via short drop lines to anywhere along the trunk. Terminators on each end of the bus (often switchable and integrated into the connectors) prevent signal reflections.

In addition to ready-made and field-attachable M12 connectors, Pepperl+Fuchs also offers T-splitters and Y-splitters as passive cordsets. Integrated terminators for the bus line in both M12 and SUB-D design are also available.

Your Benefits at a Glance

- Reliability – manufactured in compliance with fieldbus user organization guidelines
- Industry-compatible – robust and reliably sealed
- Flexibility – we are happy to customize our products to meet your specific product needs
- Shortest delivery times – even for customized products
- Quality – exhaustive functional testing of all connectors

Our Type Code – Your Order Code

Simply use our type code to order the product you desire with a minimum of fuss. We'll show you how!

For example, just select the desired length and enter this into the empty space on the type code – your order code is complete.

Example

You wish to order the following Ethernet connection cable:

- M12 plug to RJ45, 1:1 pinout
- 2 m cable length

The diagram shows the type code **V1SD-G-2M-PUR-ABG-V45-G** with annotations:

- V1SD**: Cable lengths in m (0.5 ... 60). Legend: ● Standard, cable lengths of 2m, 5m and 10m available in stock; ○ Available, minimum order quantity applies in some cases; - Not available.
- G**: Cable layout (1:1 or X crossed).
- 2M**: Cable length in meters.
- PUR**: Jacket material (PUR).
- ABG**: Connector type (ABG).
- V45**: Connector type (V45).
- G**: Cable layout (1:1 or X crossed).

As you can see from the image above, the correct order code is: **V1SD-G-2M-PUR-ABG-V45-G.**

Technical Information

The user must follow the appropriate equipment instructions when using connectors. We reserve the right to alter designs for quality improvement, product enhancement and technology improvements. The technical information listed in the catalog is based on connectors that are not allowed to be connected in energized condition.

The distance to conductive parts should not be minimized by stripping the insulation. Take care when soldering cables to ensure that no individual strands are loose or exposed, making possible the risk of short-circuits. Listed below are the key standards and regulations to which our products are produced and tested.

Product-Specific Standards

DIN IEC 61076-2-101 / DIN EC 61076-2-104

Connectors for electronic equipment

Part 2-101: Circular connectors – design specification for screw-locking M12 connectors for low-voltage applications

Part 2-104: Circular connectors – design specification for screw or snap-locking M8 connectors for low-voltage applications

These standards specify the design guidelines for M12 and M8 connectors. They also serve as the basis for the test specifications.

DIN EN 175301-803

Design specification:

Rectangular connectors – 0.8 mm-thick flat contacts, captive-locking screws

This standard specifies the design guidelines for valve connectors. It also serves as the basis for the test specification.

DIN EN 60664-1

Coordination of the insulation of electronic equipment in low-voltage systems – Part 1:

Principles, requirements and tests

This standard replaces DIN VDE 0110-1, which was valid until the end of the transitional period in May 2006. These standards define the air and creepage distances depending on area of application, material and degree of pollution.

DIN EN 61984

Connectors – Safety requirements and tests

This standard replaces DIN VDE 0627, which was valid until the end of the transitional period in October 2004. In addition to the product-specific standards for connectors, this standard specifies further design requirements and calls for individual testing.

DIN EN 60512

Connectors for electronic equipment – Tests and measurements

This standard specifies the test requirements for connectors. The test program includes: climate/mechanical tests, test description of the mechanical characteristics of connectors such as max. current and insulation resistance.

DIN EN 60068

Environmental tests

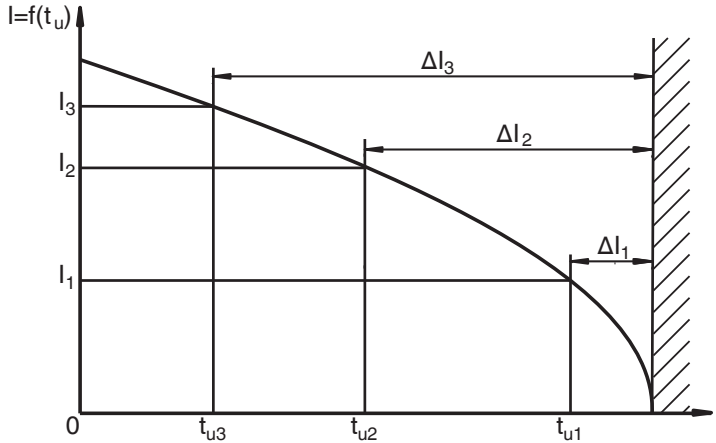

In this series of tests the possible influences on the environment are defined. Among other things, this includes climatic influences such as dry heat, coldness, moist heat and temperature cycles as well as mechanical influences such as vibration and shock. With these tests, the influences from the location to be used are checked in the laboratory.

DIN EN 60529

Protection class due to housing (IP code)

In this standard the IP code is defined. The test setup and the test conditions necessary to comply with the IP coding are prescribed.

Standards and Test Conditions

Characteristic	Standard	Note
Housing degree of protection	IEC 60529	When plugged in.
Mechanical service life	IEC 60512-5 (Test 9a)	Test is carried out with no electrical load
Rated voltage	IEC 60664-1	The value given is defined in combination with the degree of pollution and the surge category
Impulse test voltage	IEC 60664-1	Highest impulse voltage value that does not cause the insulation to be pierced
Current carrying capacity	IEC 60512-3 (Test 5b)	The current carrying capacity of a connector determines whether current can be conducted continuously and simultaneously through all contacts. The current carrying capacity drops as the ambient temperature increases (derating).  <p>Example of a derating curve</p>
Rated current		Relates to an ambient temperature of +40 °C
Volume resistance	IEC 60512-2 (Test 2a)	Transfer resistance between contact pin and socket when plugged in over a defined area
Insulation resistance	IEC 60512-2 (Test 3a)	Insulation between two conductive parts (material-dependant)

IP CODE IN GENERAL

For safety reasons, electrical equipment must be protected from any external influences. This is ensured by housings and enclosures that protect the electrical equipment from contact with dangerous parts and prevent the ingress of solid foreign objects, dust, humidity and water.

The German standards DIN EN 60529 entitled “Degrees of protection provided by enclosures (IP code)” and DIN 40050-9 “Vehicles; IP protection classes; protection against solid foreign objects, water and contact; electrical equipment” form the basis for the definition and classification of the protection class for a product and provide additional information regarding such protection.

INTERNATIONAL PROTECTION CLASSES ACCORDING TO DIN EN 60529 (IEC 529/VDE 047 T1)

IP 6 7

Degree of protection against contact and foreign objects	Degree of protection against water
0 -No protection	0 -No protection
1 -Protected against access to dangerous parts with the back of the hand -Protection against hard foreign objects 50 mm in diameter and larger	1 -Protection against vertically dripping water
2 -Protection against access to dangerous parts with a finger -Protection against hard foreign objects 12.5 mm in diameter and larger	2 -Protection against dripping water when the housing is tilted up to 15°
3 -Protection against access to dangerous parts with a tool -Protection against hard foreign objects 2.5 mm in diameter and larger	3 -Protection against falling water spray when the housing is tilted up to 60°
4 -Protection against access to dangerous parts with a wire -Protection against hard foreign objects 1.0 mm in diameter and larger	4 -Protection against splashed water
5(K) -Protection against access to dangerous parts with a wire -Dust protection	4k -All round protection against water sprayed under increased pressure
6(K) -Protection against access to dangerous parts with a wire -Dustproof	5 -Protection against water injection (nozzle) from any angle
	6 -Protection against strong water injection (flooding)
	6k -Protection against strong water injection under increased pressure (flooding)
	7 -Protection against the effects of temporary submersion in water
	8 -Protection against the effects of continuous submersion in water
	9k -Protection against water when high-pressure/ steam cleaning

Notes

If an identifier does not have to be given, it is to be replaced by the letter X.
 Devices that are designated with the second digit as 7 or 8 do not need to meet the requirements of the second digits 5 or 6, unless they have been furnished with a dual designation (e.g. IPX6/IPX7).
 The letter K is used as an individual identifier to identify street-vehicle equipment.

Coding M12 Connectors

Coding M12 connectors with a pin or groove on the contact body prevents similar M12-style connectors from being mixed up and erroneously connected. Distinctions are made between “A” standard coding, “B” coding (Reverse Key) for fieldbus applications such as Profibus, “C” coding (Double Key; also known as “U” coding) and “D” coding for Ethernet applications.

Shielding

The shield is an electrically-conductive protective coating that surrounds the signal contacts. Cable shielding is usually in the form of copper braided or aluminium foil. It reduces electromagnetic interference, disruption to signal-carrying conductors as well as preventing the radiation of electrical noise. This increases electromagnetic compatibility (EMC).

Shielded connectors and cables are strongly recommended in EMC-critical applications. Interference on the cable from external sources and vice versa is effectively suppressed by the shielding.

Shielded connectors and cables are also essential for sensitive signals and for transferring data at a high rate.

Conductive housings that can be connected to the cable shield are frequently used. When using round plug connectors, care must be taken to ensure that the cable’s braided shield is carefully attached to the shielded connection on the connector. In this situation the optimum results are achieved by total contact (through 360°).

The two components must connect seamlessly with each other when they plugged together. The screening attenuation is given in decibels (db) and is dependent on the frequency. Higher screening attenuation values demonstrate good shielding that is not dramatically effected over a large frequency range (Mhz).

Shield Connection

The type of shield connection is primarily decided by the nature of the expected interference.

To suppress electrical fields, the shield must be grounded (1) at one end. However, interference caused by a magnetic alternating field can only be suppressed if the shield is connected at both ends (2).

A ground loop, including all its known disadvantages, is created when a shield is connected at both ends. The useful signal is particularly susceptible to noise on the reference voltage. Triaxial cables (4) combat this effect. The internal shield is connected at one end, whereas the external shield is connected at both ends.

Interference of this nature when a cable shield is connected at both ends is often reduced by also connecting one end of the shield to the reference potential via a capacitor (3). This breaks the ground loop, at least for direct currents and low-frequency currents.

Calculating American Wire Gauge (AWG) in mm²

Certain branches of industry also use the American Wire Gauge (AWG) for lines and wires. The table below demonstrates how to convert AWG to mm².

AWG	Cable Structure [mm]	Cable diameter [mm]	Conductor Cross-Section [mm ²]
30	1 x 0.25	0.25	0.05
	7 x 0.10	0.36	0.06
28	1 x 0.32	0.32	0.08
	7 x 0.13	0.38	0.09
26	1 x 0.4	0.40	0.13
	7 x 0.16	0.48	0.14
24	1 x 0.51	0.51	0.21
	17 x 0.20	0.61	0.22
	19 x 0.13	0.64	0.25
22	1 x 0.64	0.64	0.33
	7 x 0.25	0.76	0.34
	19 x 0.16	0.81	0.38
20	1 x 0.81	0.81	0.52
	7 x 0.32	0.97	0.56
	19 x 0.20	1.02	0.60
18	1 x 1.02	1.02	0.82
	19 x 0.25	1.27	0.93
16	19 x 0.29	1.44	1.25
14	19 x 0.36	1.80	1.93
12	19 x 0.46	2.29	3.16
10	37 x 0.40	3.10	4.65

Please note that cables with the same AWG number may have different cross-sections due to their differing structures.

Cable Structure Data

VDE standard 0295 specifies that only the maximum single wire diameter and the corresponding highest-permissible electrical resistance have to be determined for each cable cross-section.

Cables made of Uninsulated or Tin-Plated Copper Wires Number of Wires x Wire Diameter [mm] VDE 0295							
Conductor Cross-Section [mm ²]	Single-Wire Class 1	Stranded Class 2	Finely-Stranded* Class 5	Extra Finely-Stranded* Class 6			
0.10			14 x 0.10		26 x 0.07	50 x 0.05	
0.14			18 x 0.10		36 x 0.07	72 x 0.05	
0.25			14 x 0.15	32 x 0.10	65 x 0.07	128 x 0.05	
0.34		7 x 0.25	19 x 0.15	43 x 0.10	88 x 0.07	180 x 0.05	
0.50	1 x 0.80	7 x 0.30	16 x 0.20	28 x 0.15	63 x 0.10	129 x 0.07	258 x 0.05
0.75	1 x 1.00	7 x 0.37	24 x 0.20	42 x 0.15	95 x 0.10	196 x 0.07	384 x 0.05
1.00	1 x 1.13	7 x 0.43	32 x 0.20	56 x 0.15	127 x 0.10	258 x 0.07	512 x 0.05
1.50	1 x 1.38	7 x 0.52	30 x 0.25	84 x 0.15	191 x 0.10	385 x 0.07	768 x 0.05
2.50	1 x 1.78	7 x 0.67	50 x 0.25	140 x 0.15	320 x 0.10	651 x 0.07	1281 x 0.05
4.00	1 x 2.26	7 x 0.85	56 x 0.30	224 x 0.15	512 x 0.10	1036 x 0.07	
6.00	1 x 2.77	7 x 1.05	84 x 0.30	192 x 0.20	765 x 0.10	1561 x 0.07	
10.00	1 x 3.57	7 x 1.35	80 x 0.40	320 x 0.20	1275 x 0.10		

* The number of wires in finely and extra finely-stranded cable structures are preferred values.

Certification

Depending on their intended application, different series of connectors have been tested and certificated by several certification bodies. The individual marks of conformity have the following meanings:

VDE mark for electronic components and shortform for VDE Reg. No.

All components recognized by UL (Underwriters Laboratories Inc.) are listed in an annual directory (Recognized Component Directory) and documented with the 'yellow card'. They are subject to continuous production checks. (Follow-up Service)
