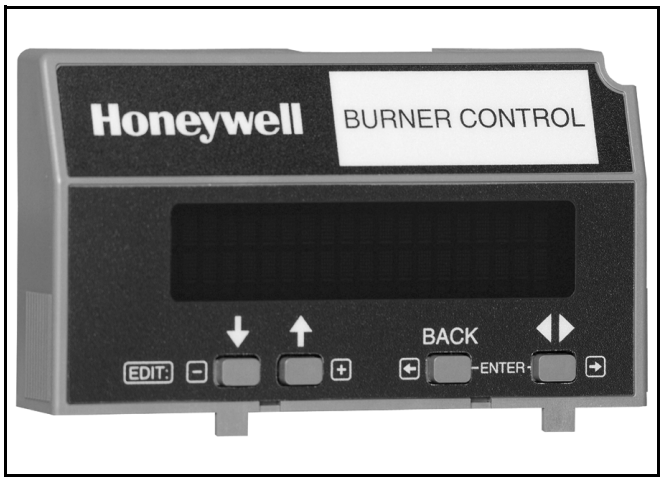
Honeywell

7800 SERIES
S7800A1142 Keyboard Display Module

PRODUCT DATA



APPLICATION

The S7800A1142 Keyboard Display Module (KDM) provides current system status along with first-out annunciation and system diagnosis using a two-row by twenty-column readout. The KDM provides local or remote annunciation of operation and fault information, remote reset, report generation, burner control data and diagnostic information. The KDM is part of the 7800 SERIES of microprocessor-based burner controls for gas, oil, coal or combination fuel single burner applications.

The 7800 SERIES is programmed to provide a level of safety, functional capabilities and features beyond the capacity of conventional controls.

The S7800A1142 is required to program the Valve Proving feature of select 7800 Series devices.

The S7800A1142 KDM offers the following technical advancements to the 7800 SERIES devices:

- Compatible with installed Honeywell 7800 SERIES systems.
- When used with the new 7800 SERIES with Valve Proving Feature, the KDM allows for programming the Valve Proving Control feature and timing (Pass Code protected feature).
- Allows for naming the S7830 Expanded Annunciator terminals to match your system drawings. (Displayed message only.)(Pass Code protected feature.)
- A three screen two-row by twenty-column readout set of “Call Service” (Business Card) alpha/numeric directions can be displayed instead of the standard lockout display message. (Pass Code protected feature). This “business card” can be cloned to other displays to save setup time.
- Enable ModBus Communication feature.

The Business Card (Call Service) and Expanded Annunciator can be made up using:

- Capital letters (A through Z).
- Lower case letters (a through z).
- Numbers (1 through 0).
- Symbols (!, @, #, $,%, etc.).
- Spanish symbols.

Programming can be done with the S7800 KDM mounted on a 7800 SERIES Relay Module or with a 13 Vdc power source connected to the KDM through the 203541 5-wire connector.

Since your Business Card (Call Service) S7800A1142 will be left at the job site, programming your personal three-number password and personal lockout message can be set up ahead of time without being connected to a 7800 SERIES device. A clone function allows you to make multiple Business Cards from the original display.

FEATURES

- **Application flexibility.**
- **Communication interface capability.**
  - **— Through Q7700 Network Interface Unit**
  - **— Through 203541 Connector on the ModBus data highway.**
- **Dependable, long-term operation provided by microcomputer technology.**
- **First-out annunciation and system diagnostics provided by a 2-row by 20-column display.**
- **First-out expanded annunciation with 24 limit and interlock Light Emitting Diodes (LEDs).**
- **Local or remote annunciation of operation and fault information.**
- **UL NEMA Class 4 rating when p/n 204718A,C NEMA 4 cover is used.**
- **Remote reset.**
- **Report generation.**
- **Burner controller data:**
  - **— Sequence status.**
  - **— Sequence time.**
  - **— Hold status.**
  - **— Lockout/alarm status.**
  - **— Flame signal strength.**
  - **— Expanded annunciator status.**
  - **— Total cycles of operation.**
  - **— Total hours of operation.**
  - **— Fault history of six most recent faults:**
    - **Cycles of operation at time of fault.**
    - **Expanded annunciator data at time of fault.**
    - **Fault message and code.**
    - **Hours of operation at time of fault.**
    - **Sequence status at time of fault.**
    - **Sequence time at time of fault.**
  - **— Diagnostic information:**
    - **Device type.**
    - **Flame amplifier type.**
    - **Flame failure response time (FFRT).**
    - **Manufacturing code.**
    - **On-Off status of all digital inputs and outputs.**
    - **PREPURGE time selected.**
    - **Software revision and version of 7800 SERIES.**
    - **Relay Module and KDM.**
    - **Status of configuration jumpers.**
    - **Status of Run/Test Switch.**

SPECIFICATIONS

Electrical Ratings:
Voltage and Frequency: 13 Vdc peak full wave rectified (+20%/-15%).
Power Dissipation: 7W maximum.
VA consumption: 2 VA maximum.

Terminal Ratings:
Power: 13 Vdc peak full wave rectified.
Earth Ground.

Environmental Ratings:
Ambient Temperature Ranges:
Operating: -40°F (-40°C) to +140°F (+60°C).
Storage: -60°F (-51°C) to +150°F (+66°C).
Humidity: 85% relative humidity continuous, noncondensing.

NOTE: UL NEMA Class 4 rating when P/N 204718A,C NEMA 4 Cover is used.

Vibration: 0.5G environment.

Mechanical:
Dimensions: See Fig. 1.
Weight: 4 oz. (124 grams), unpacked.

Display:
40 character (2 rows by 20 columns).

Languages:
S7800A1142 English Language display.

Approvals:
Underwriters Laboratories Inc. Listed: File No. MP268, guide No. MCCZ.
Canadian Standards Association Certified: No. LR9S329-3.
Factory Mutual Approved: Report No. J.I.1V9A0.AF.
IRI: Acceptable.
Federal Communications Commission: Part 15, Class B emissions.
EN60730: For compliance with remote KDM mounting requirements, provide electrical insulation separation by insulation using double or reinforced insulation. Do this by: Optically isolating the communication or remote reset lines from the control cabinet, or provide physical separation from the communication or remote display cover assembly (part number 204718A) or other suitable enclosure that meets the IP40 class of protection.

ORDERING INFORMATION

When purchasing replacement and modernization products from your TRADELINE® wholesaler or distributor, refer to the TRADELINE® Catalog or price sheets for complete ordering number.

If you have additional questions, need further information, or would like to comment on our products or services, please write or phone:

1. Your local Honeywell Automation and Control Products Sales Office (check white pages of your phone directory).
2. Honeywell Customer Care
   1885 Douglas Drive North
   Minneapolis, Minnesota 55422-4386

In Canada—Honeywell Limited/Honeywell Limitée, 35 Dynamic Drive, Scarborough, Ontario M1V 4Z9.
International Sales and Service Offices in all principal cities of the world. Manufacturing in Australia, Canada, Finland, France, Germany, Japan, Mexico, Netherlands, Spain, Taiwan, United Kingdom, U.S.A.

Accessories:
203541 ControlBus™ 5-wire Electrical Connector.
S7810A1009 Data ControlBus™ Module.
203765 Remote Display Mounting Bracket.
221818A 60 in. (1.5 m) Extension Cable Assembly.
221818C 120 in. (3 m) Extension Cable Assembly.
204718A NEMA 4 Cover Assembly for S7800A KDM.
204718B NEMA 1 Cover Assembly for S7800A KDM.
204718C NEMA 4 Cover Assembly for S7800A KDM with reset button.
205321B Remote Display Flush Mount Kit.

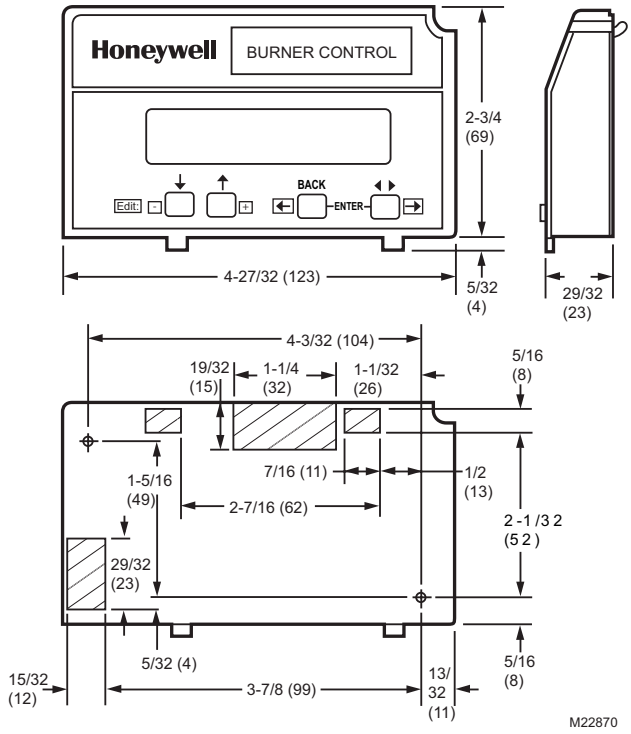

Fig. 1. Approximate dimensions of S7800A1142 in. (mm).

INSTALLATION

⚠ WARNING

Electrical Shock Hazard.
Can cause severe injury, death or property damage.
Disconnect the power supply before beginning installation to prevent electrical shock and equipment damage. More than one power supply disconnect can be involved.

When Installing This Product…

1. Read these instructions carefully. Failure to follow them could damage the product or cause a hazardous condition.
2. Check the ratings given in the instructions and marked on the product to make sure the product is suitable for your application.
3. Installer must be a trained, experienced, flame safeguard service technician.
4. After installation is complete, check out the product operation as provided in these instructions.
5. Be sure wiring complies with all applicable codes, ordinances and regulations.
6. See Fig. 5, 6 and 7 for S7800A unique wiring connections.

IMPORTANT

1. *This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, can cause interference to radio communications. It has been tested and found to comply with the limits for a Class B computing device of Part 15 of FCC rules which are designed to provided reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area can cause interference, in which case, users, at their own expense, can be required to take whatever measures are required to correct this interference.*
2. *This digital apparatus does not exceed the Class B limits for radio noise for digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.*

Humidity

Install the S7800A where the relative humidity never reaches the saturation point. The S7800 is designed to operate in a maximum 85% RH continuous, noncondensing, moisture environment.

Vibration

Do not install the S7800A where it can be subjected to vibration in excess of 0.5G continuous maximum vibration.

Weather

The S7800A is not designed to be weather tight. If installed outdoors, the S7800A must be protected by an approved weather-tight enclosure such as the 204718A or 204718C NEMA 4 Enclosure listed in Accessories.

S7800A1142 Embedded Features

A. See Appendix A to set up the following features:

- **Call Service (Business Card) information displayed when burner system is in Lockout of the 7800 SERIES device.**
- **Customizing of Expanded Annunciator (S7830) message to match a given installed limit string. If ModBus Feature is required, use S7810M1003 ModBus Module.**
- **ModBus communication setup and enable feature: Note that this will occupy terminals 1, 2, 3 of the 203541 Connector on the KDM, which disables the Expanded Annunciator Features.**

SERVICE NOTE:
The S7800A1142 can either do the Expanded Annunciator Feature or ModBus -- not both. If BOTH are required, order the S7810M1003 ModBus Module for the ModBus option.

B. The S7800A1142 KDM is also used to program the Valve Proving and Post-purge feature of Select RM7800 SERIES devices. See Appendix C and D.

Mounting KDM on 7800 SERIES Relay Module.

1. Align the two interlocking ears of the KDM with the two mating slots on the 7800 SERIES Relay Module. See Fig. 2.

Fig. 2. Keyboard Display Module mounting.

2. Insert the two interlocking ears into the two mating slots and, with a hinge action, push on the lower corners of the KDM to secure it to the 7800 SERIES Relay Module.
3. Make sure the KDM is firmly in place.

Remote Mounting KDM

The KDM can be mounted either on the face of a panel door or on other remote locations. See Fig. 3. When mounting the KDM on the face of a door panel, closely follow these instructions:

Door Panel Mounting

Fig. 3. Panel mounting of a Keyboard Display Module.

1. Select the location on the door panel for flush mounting.
2. Pay attention to the insertion dimensions of the two KDM screws, two interlocking ears, and the two plug-in connections to allow for sufficient clearance.
3. Use the KDM or Data ControlBus Module™ as a template (Fig. 19) and mark the two screw locations, interlocking ear locations and the two plug-in connector locations.
4. Drill the pilot holes for the mounting screws.
5. Cut holes in the door panel for the interlocking ears and the two plug-in connectors.
6. Mount the KDM, securing it with the two screws provided in the KDM bag assembly.

Remote Display Mounting Bracket

Use the 203765 Remote Display Mounting Bracket when mounting the KDM on a wall or remote location:

1. Use the 203765 Remote Display Mounting Bracket as a template to mark the four screw locations.
2. Drill the pilot holes for the four mounting screws.
3. Mount the 203765 Remote Display Mounting Bracket by securing the four no. 6 screws (M3.5 x 0.6). See Fig. 4.
4. Mount the KDM by aligning the two interlocking ears with the two mating slots on the remote mounting bracket.
5. Insert the two interlocking ears into the two mating slots.
6. Push on the lower corners of the KDM to secure it to the remote mounting bracket.
7. Make sure the KDM is firmly in place.

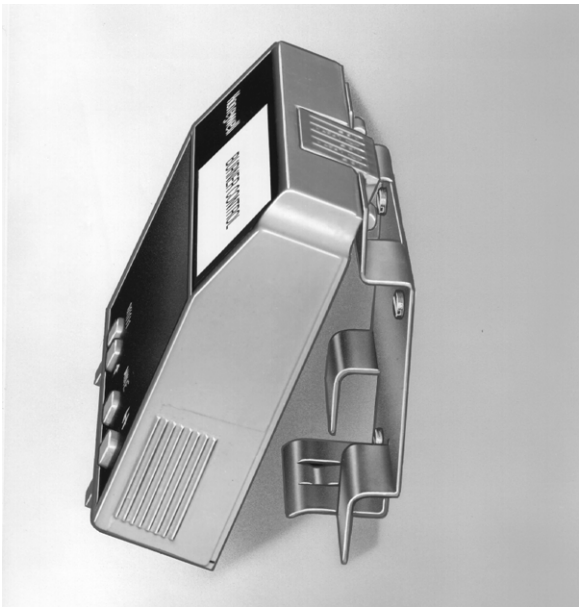

Fig. 4. Remote mounting of a Keyboard Display Module using a 203765 Remote Display Mounting Bracket.

WIRING

⚠ WARNING

Electrical Shock Hazard.
Can cause severe injury or death.
To prevent electrical shock and equipment damage, disconnect the power supply from the main disconnect before beginning installation. More than one disconnect can be involved.

1. Refer to Fig. 5, 6, and 7 for proper wiring.
2. Make sure all wiring complies with all applicable electrical codes, ordinances and regulations.
3. For recommended wire size and type, see Table 1.

4. For Recommended grounding practices, see Table 2.
5. For KDM: The KDM is powered from a low voltage, energy-limited source. It can be mounted outside of a control panel if it is protected from mechanical damage.

NOTE: A 13 Vdc power supply must be used any time more than one KDM is used. A maximum of two KDM, Data ControlBus™ Modules or S7810B Multi-Drop Switch Modules are allowed in any combination.

Table 1. Recommended Wire Size and Part Number.

Application	Recommended Wire Size	Recommended Part Number
Keyboard Display Module	22 AWG two-wire twisted pair with ground, or five-wire.	Belden 8723 shielded cable or equivalent.
Data ControlBus™ Module	22 AWG two-wire twisted pair with ground, or five-wire.	Belden 8723 shielded cable or equivalent.
Remote Reset Module	22 AWG two-wire twisted pair, insulated for low voltage.	—
Communications Interface ControlBus Module™	22 AWG two-wire twisted pair with ground.	Belden 8723 shielded cable or equivalent.
13 Vdc full wave rectified transformer power input.	18 AWG wire, insulated for voltages and temperatures for given applications.	TTW60C, THW75C, THHN90C

Table 2. Recommended Grounding Practices.

Ground Type	Recommended Practice
Signal ground (KDM, Data ControlBus™ Module, Communications Interface ControlBus Module™).	Use the shield of the signal wire to ground the device to the signal ground terminals [3(c)] of each device. Connect the shield at both ends of the daisy chain to ground.

6. Recommended wire routing:
   a. ControlBus:
      (1) Do not route the ControlBus cable in conduits that carry line voltage circuits.
      (2) Avoid routing the ControlBus cable close to ignition transformer leadwires.
      (3) Route the ControlBus cable outside of conduit if properly supported and protected from damage.
   b. Remote Reset:
      (1) Do not run high voltage ignition transformer wires in the same conduit with the Remote Reset wiring.
      (2) Do not route Remote Reset wires in conduit with line voltage circuits.
7. Maximum wire lengths:
   a. KDM: The maximum length interconnecting wire is 4000 ft (1219m).
   b. Remote Reset leadwires: The maximum length wire is 1000 ft (300m) to a Remote Reset push-button.
8. Install all electrical connectors.
9. Restore power to the panel.

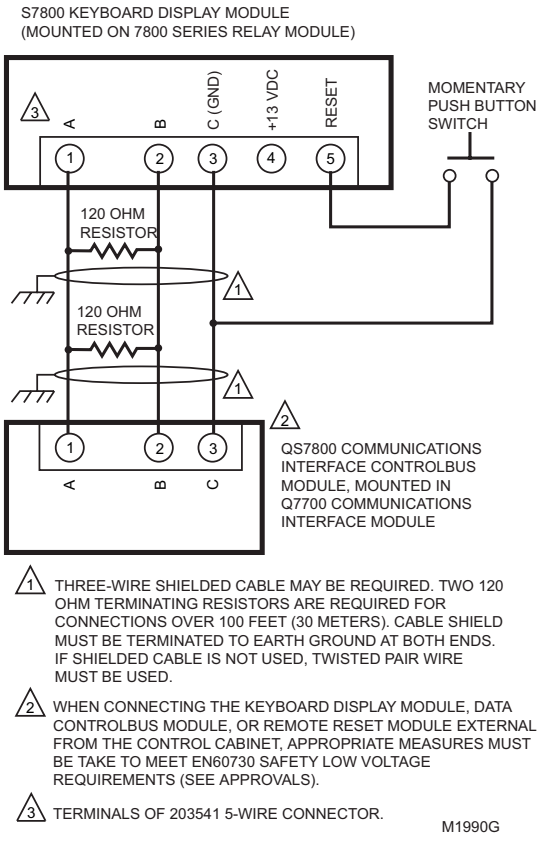

Fig. 5. Wiring the Keyboard Display Module.

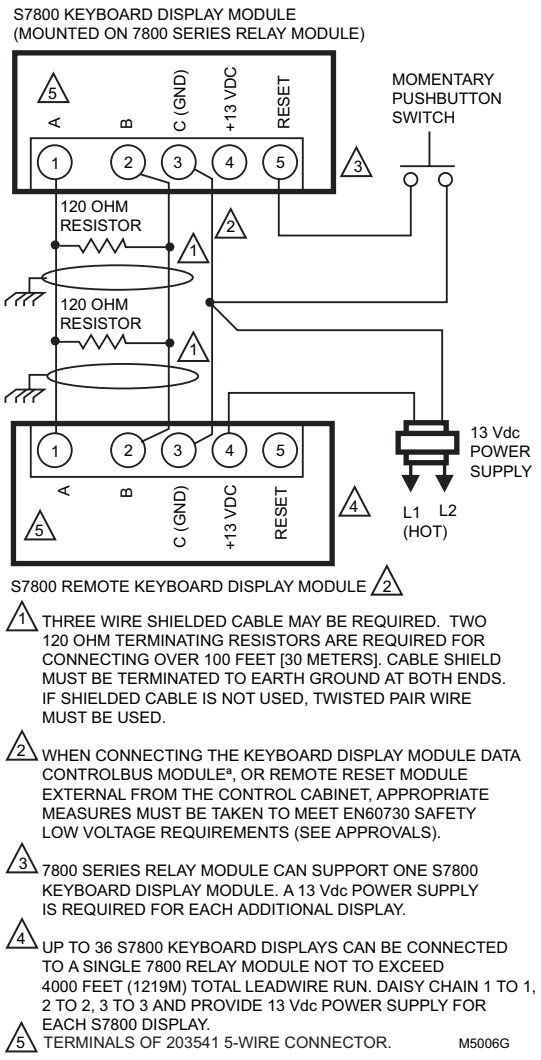

Fig. 6. Wiring for multiple Keyboard Display Modules.

KDM Display

The first line of the KDM display provides current status of the burner sequence (STANDBY, PURGE, PILOT IGN, MAIN IGN, RUN and POSTPURGE), timing information (PURGE, PILOT IGN, MAIN IGN and POSTPURGE) in minutes and seconds, hold information (PURGE HOLD), and lockout information (Lockout, Fault Code, Message and Sequence). The extreme right side of the first line will be either blank or will show a small arrow pointing to the second line followed by a two-letter code (DI—Diagnostic Information, Hn—Fault History Information (where n equals the number of the fault), and EA—Expanded Annunciator). When the arrow and two-letter code are displayed, it indicates the second line is showing a selectable message submenu. The second line will display selectable or preemptive messages. A selectable message supplies information for flame strength, system status indication, system or self-diagnostics and troubleshooting. A preemptive message has parentheses around the message and supplies a detailed message to support the sequence status information. A preemptive message can also be a lockout message. A preemptive message replaces a selectable message to support the sequence status information. It also replaces a selectable message after 60 seconds if it or a lockout message is available. The 7800 SERIES Relay Module LED provide positive visual indication of the Relay Module sequence. The LED is energized simultaneously with the correct sequence description.

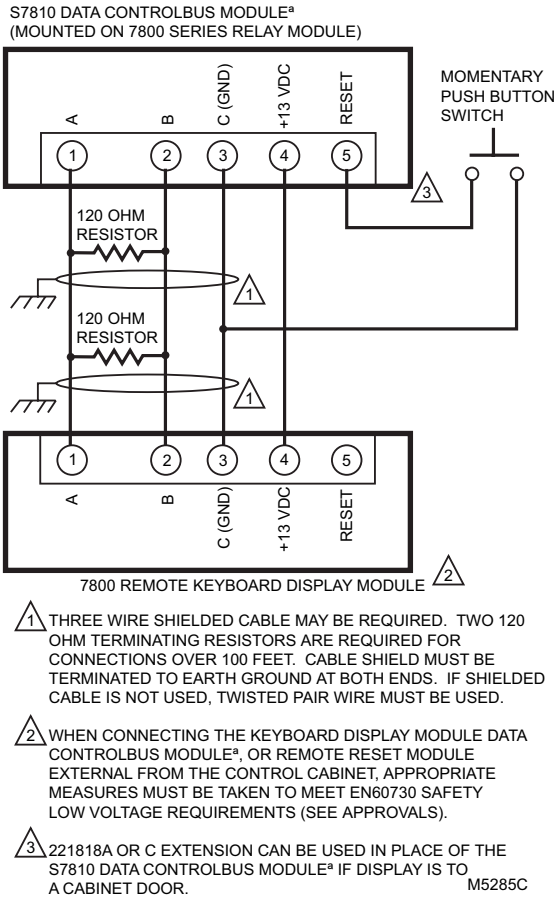

Fig. 7. Wiring Keyboard Display Module for remote mounting.

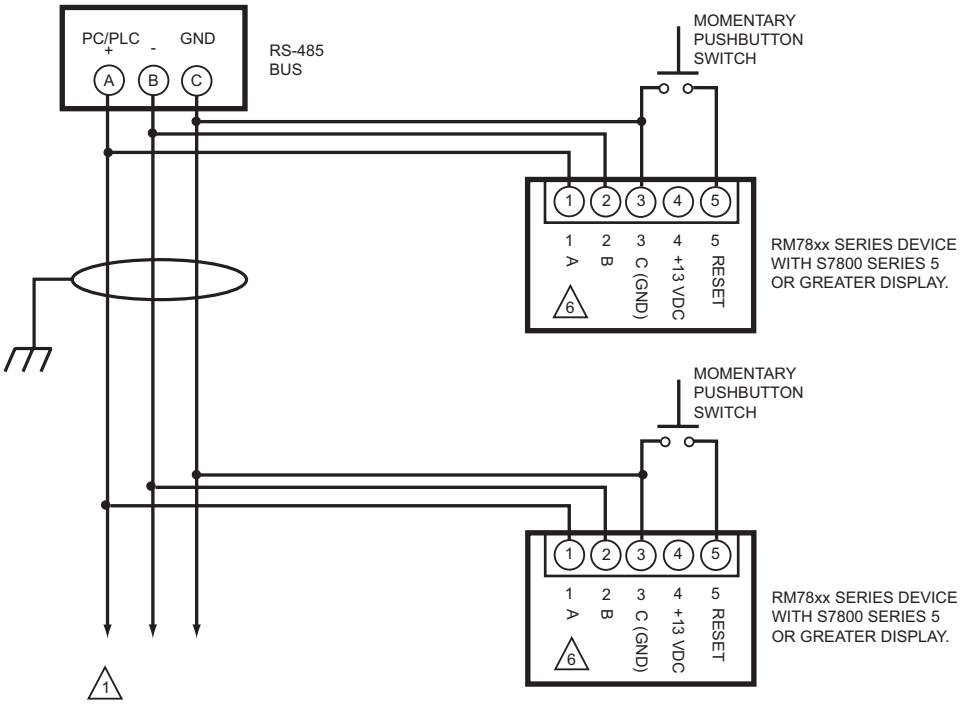

1. MULTI-DROP RS-485 COMMUNICATION BUS. UP TO 31 S7800 SERIES 5 OR GREATER DISPLAYS CAN BE CONNECTED TO A SINGLE BUS WITHOUT AN RS-485 REPEATER. UP TO 99 MODBUS™ (SUBNETWORKS) CAN BE CONNECTED TO A BUS WITH RS-485 REPEATERS. WHEN USING AN RS-485 REPEATER, THE REPEATER MUST BE INSTALLED EVERY 30TH MODULE.

2. THE SUBNETWORKS MUST BE WIRED IN A DAISY CHAIN CONFIGURATION. RECOMMEND THAT THE PC/PLC BE AT ONE END OF THE DAISY CHAIN.

3. MODBUS™ COMMUNICATION BUS TERMINATION RESISTORS:

   A. WITHOUT RS-485 REPEATER:
   MODULES AT THE CLOSEST AND FARTHEST END OF THE DAISY CHAIN REQUIRE TERMINATION RESISTORS.
   INSTALL A 120 OHM, 1/4 WATT RESISTOR BETWEEN TERMINALS A AND B OF THE PC/PLC (IF INSTALLED AT ONE END THE DAISY CHAIN).
   INSTALL A 120 OHM, 1/4 WATT RESISTOR BETWEEN TERMINALS 7 AND 8 OF THE LAST S7810M MODBUS™ MODULE IN THE DAISY CHAIN.

   B. WITH RS-485 REPEATER:
   WHEN AN RS-485 REATER IS USED, TWO DAISY CHAIN CONFIGURATIONS ARE EFFECTIVELY FORMED. MODULES AT THE CLOSEST AND FARTHEST ENDS OF EACH DAISY CHAIN REQUIRE TERMINATION RESISTORS. INSTALL A 120 OHM, 1/4 WATT RESISTOR BETWEEN TERMINALS A AND B OF THE PC/PLC (IF INSTALLED AT THE END OF THE DAISY CHAIN. INSTALL A 120 OHM, 1/4 WATT RESISTOR BETWEEN INPUT TERMINALS DATA+ AND DATA- OF THE RS-485 REPEATER. INSTALL A 120 OHM, 1/4 WATT RESISTOR BETWEEN TERMINALS 7 AND 8 OF THE LAST S7810M MODBUS™ MODULE IN THE ADDITIONAL DAISY CHAIN.

4. LOCAL RS-485 COMMUNICATIONS BUS. THE DEVICES ON THIS BUS MUST BE WIRED IN A DAISY CHAIN CONFIGURATION. THE ORDER OF INTERCONNECTION IS NOT IMPORTANT. THE MODULES ON THE CLOSEST AND FARTHEST ENDS OF THE DAISY CHAIN REQUIRE A 120 OHM, 1/4 WATT TERMINATION RESISTOR BETWEEN TERMINALS 1 AND 2 OR A AND B.

5. THREE WIRE SHIELDED CABLE (BELDEN 8723 SHIELDED OR EQUIVALENT) IS RECOMMENDED AND SHOULD BE GROUNDED AS FOLLOWS: IF NO INTERFERENCE IS PRESENT, OR TO REDUCE CAPACITIVE INTERFERENCE, THE SHIELD SHOULD BE GROUNDED AT ONE END. WHEN GROUNDING ONLY ONE END OF THE THE SHIELD, THE SHIELD END CLOSEST TO THE S7810M MODBUS™ MODULE SHOULD BE ATTACHED TO EARTH GROUND. TO REDUCE INDUCTIVE INTERFERENCE (RF INTERFERENCE), THE SHIELD SHOULD BE GROUNDED AT BOTH ENDS.

6. TERMINAL NUMBERS ARE ON 203541 5-WIRE CONNECTOR (SUPPLIED WITH REMOTE MOUNTING BRACKET).

M24190

Fig. 8. Wiring for ModBus™ Feature.

NOTE: LED has been replaced by block characters visible on the MB address setup menu.

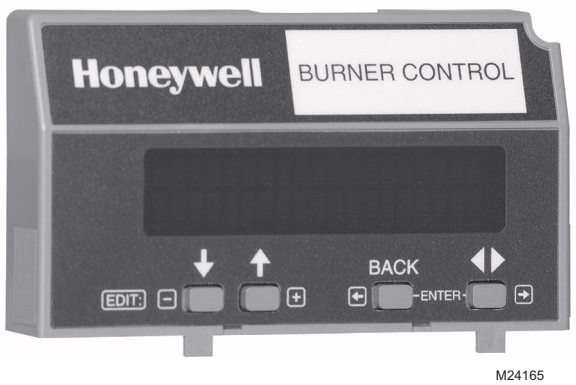

Fig. 9. S7800 Keyboard Display Module.

Keyboard Functions

The keyboard contains four push-buttons with separate functions (SCROLL-down, SCROLL-up, MODE, and CHANGE-LEVEL). The MODE and CHANGE-LEVEL, when pressed together, provide a SAVE function. When in the Setup Screen—Mode and Change Level serves as Menu or Enter.

1. Down-up arrow push-buttons. See Fig. 10. The down-up arrow push-buttons are used to scroll through the selectable messages. The double-headed arrow (↕), which is located in the lower left position of the second line of the display, represents the down-up push-buttons. The down-up push-buttons can be pressed to display the selectable messages one at a time or held down to scroll through the selectable messages at the rate of two per second. When the last item of the selectable message is viewed, the display wraps around and displays the first selectable message again.
2. The ◄ ► push-button, see Fig. 11. The ◄ ► push-button is used to change between the first hierarchy of selectable messages to a subset of selectable messages. The ◄ ► push-button can also be used to change from a subset message to a first level selectable message. The symbol located on the second line in the lower right corner of the display, represents a subset of selectable messages.
3. BACK push-button, see Fig. 12. Use the BACK push-button to instantaneously switch the display from a second-line selectable message to a second-line preempted message. The sixty second time-out function can also be used for this task. The BACK push-button only works if there is a second-line preempted message or a lockout message.

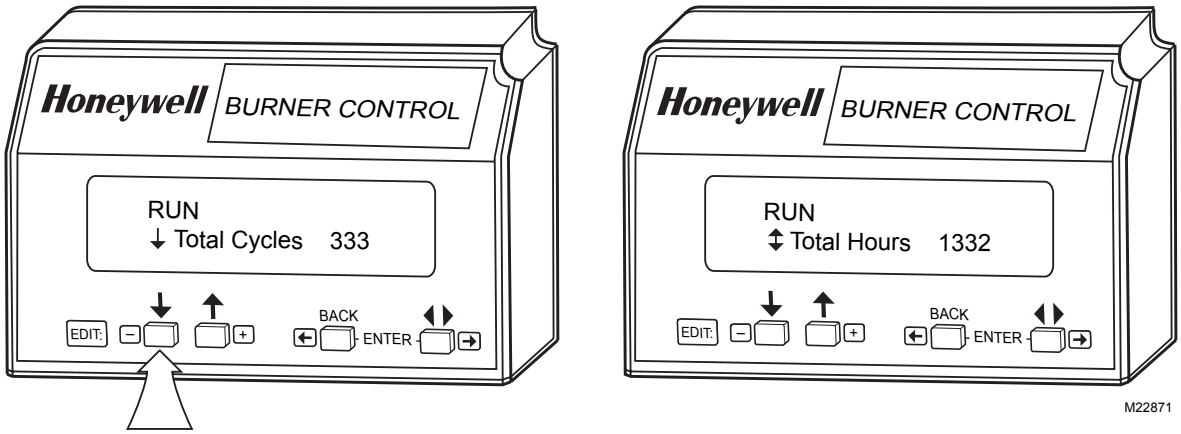

Fig. 10. ↑↓ Push-button function.

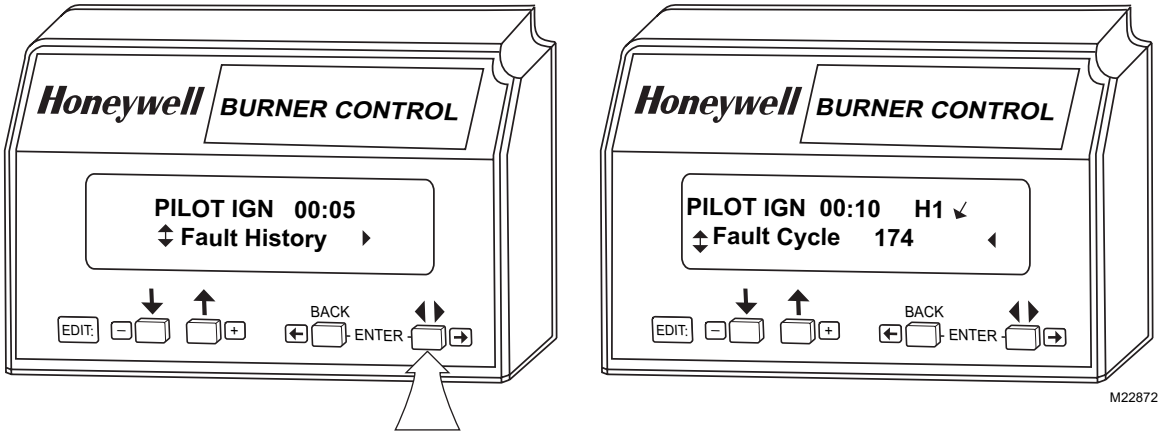

Fig. 11. ◄ ► push-button function.

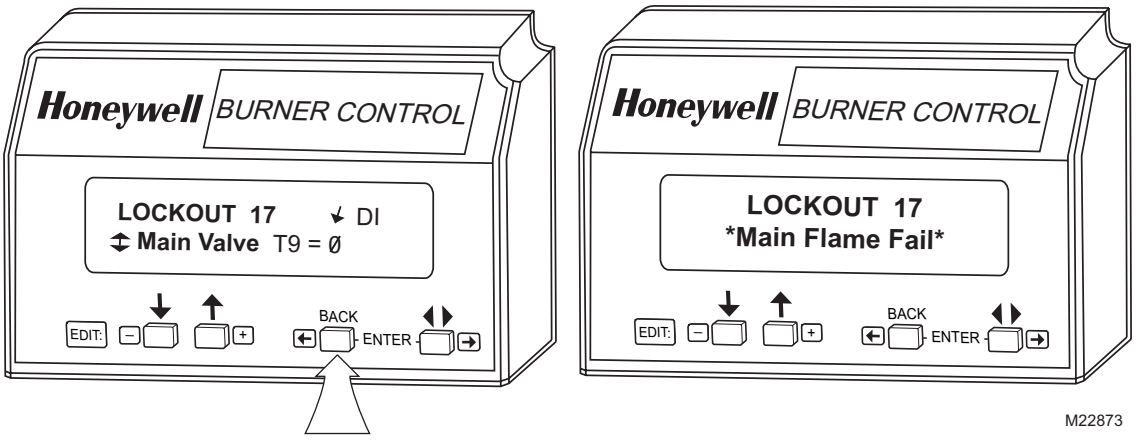

Fig. 12. BACK push-button function.

4. SAVE function, see Fig. 13, 14, and 15.

a. Enables users to identify the selectable 2nd line message they want to view upon power restoration. (See "Total Cycles" instead of "Flame Signal" for example.) The second line selectable message is restored to the most recently saved selection when power returns.

b. Press the down-up arrows until the desired second line is displayed. Press the ENTER function. (See Fig. 13.)

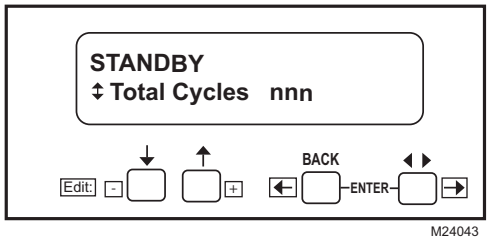

Fig. 13. SAVE function.

c. The following Display will appear:

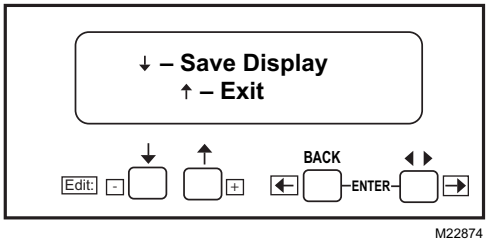

Fig. 14. Save Display/Exit screen

d. Press the ↓ to save the desired second line. Pressing the ↑ will EXIT without changing the second line.

Fig. 15. Save Display...Saving screen.

The second line of the display is now changed to the new selected message.

Table 3. Selectable Messages .

Selectable Message/Display	Description	Possible States/ Range (Terminals)	Comments
↕Flame Signal	Flame signal strength.	0 - 5.0 Vdc Flame Amp (+ and - (Com))	Flame relay pull-in and drop-out value 1.25 Vdc.
↕Total Cycles	Total number of equipment operating cycles.	0 - 99,999 (250,000; 999,999[c]) cycles[a]	Cycle will be updated each time main valve is energized.
↕Total Hours	Total number of equipment operating hours.	0 - 99,999 (250,000; 999,999[c]) hours[a]	Hour will be updated each time main valve output is energized for 60 minutes.
↕Fault History > (Six most recent faults)	First level prompt for history information. Has subset level.	—	—
↕Fault Cycle ↙ H1	Cycle when fault occurred.	0 - 99,999 cycles (250,000; 999,999[c]) cycles	—
↕Fault Hours ↙ H1	Run hour when fault occurred.	0 - 99,999 (250,000; 999,999[c]) hours[a]	—
↕Fault Code ↙ H1	Number that identifies the reason for lockout.	0 - 999	—
↕*Fault Message* ↙ H1	Indicates cause of lockout.	—	—
↕Sequence Message ↙ H1	Indicates where in the sequence the lockout occurred.	—	—
↕(Second Line Message) ↙ H1	Second line message explains any further information that is available from the 7800 SERIES or may be blank if there is not a preemptive second-line. H2…H6 etc.	—	—
↕Diagnostic Information >	First level prompt for diagnostic information. Has subset level.	—	—
↕Device	Device type number.	RM78XXX, R7140, or EC78XXX	—
↕Device Suffix	Device suffix number.	nnnn	—
↕Run/Test Sw.	Position of Run/Test Switch.	RUN or TEST	Indicates if 7800 SERIES is in RUN or TEST mode.
↕OperControl T6	Operating Control Input.	= 1 or 0	Indicates if input is on or off, energized or de-energized.
↕Interlock T7	Running/Lockout Interlock.	= 1 or 0	Indicates if input is on (1) or off (0), energized or de-energized.
↕Pilot Valve	T8 Pilot Valve.	= 1 or 0	Indicates if output terminal is on or off, energized or de-energized.
↕Main Valve	T9 Main Fuel Valve.	= 1 or 0	Indicates if output terminal is on or off, energized or de-energized.
↕Ignition	T10 Ignition.	= 1 or 0	Indicates if output terminal is on or off, energized or de-energized.
↕LowFire Sw	T18 Low Fire Switch.	= 1 or 0	Indicates if input is on or off, energized or de-energized.
↕HighFireSw	T19 High Fire Switch.	= 1 or 0	Indicates if input is on or off, energized or de-energized.
↕PreIgn ILK	T20 or T17[b] Pre-Ignition Interlock	= 1 or 0	Indicates if input is on or off, energized or de-energized.

Table 3. Selectable Messages (Continued).

Selectable Message/Display	Description	Possible States/ Range (Terminals)	Comments
↕Valv/Start	T21 Interrupted/Intermittent Pilot Valve, First Stage Oil Valve or Start Input.	= 1 or 0	Indicates if output is on or off, energized or de-energized.
↕Jumper 1	Pilot Flame Establishing Period (PFEP).	INTACT/CLIPPED	Display shows state of PFEP jumper. If jumper is intact, 7800 SERIES was 10 second PFEP. If jumper is clipped, 7800 SERIES has 4 second PFEP.
	First Safety Time (for RM/ EC7850).	INTACT/CLIPPED	Display shows state of First Safety Time (EC7850) jumper. If jumper is intact, EC7850 has 5 second First Safety Time. If jumper is clipped, the EC7850 has 3 second First Safety Time.
↕Jumper 2	Pilot Valve.	INTACT/CLIPPED	Display shows state of Pilot Valve (terminal no. 21). If jumper is intact, RM7800G has Intermittent Pilot Valve. If jumper is clipped, RM7800G has 15 or 30 second Interrupted Pilot Valve.
	Main Trial Time (for RM/ EC7850).	INTACT/CLIPPED	Display shows state of Main Trial Time (EC7850)Valve (terminal no. 21). If jumper is intact, EC7850 has 5 second Main Trial Time. If jumper is clipped, EC7850 has 3 second Main Trial Time.
↕Jumper 3	Start-up Airflow Switch (AFS) check.	INTACT Disabled/CLIPPED Enabled	Display shows state of Start-up AFS check jumper. If jumper is clipped, RM7800 AFS check is enabled and if jumper is intact, AFS check is disabled.
↕Amp Type	Defines type of amplifier installed.	STANDARD/AMP-CHECK/ SHUTTER	Display shows type of flame detection system installed (i.e., as STANDARD, AMP-CHECK/ AMPLI-CHECK™ and SHUTTER/ Dynamic Self-Checking).
↕Flame Response	Amplifier Flame Failure Response Time (FFRT) in seconds.	0.8 second, 1 second, 2 seconds, or 3 seconds	—
↕Purge Time	Timing value of purge card.	mm:ss	Two seconds to 30 minutes.

[a]European Approved Controls.

[b] Pre-Ignition Interlock Terminal 17 or 20 is model dependent.

[c] Valve Proving Device or RM7897.

[d] The display values are as follows:

n represents a numbered value.
T represents the terminal number.
x represents the suffix letter of the Relay Module.

Expanded Annunciator Messages (Table 4)

The Expanded Annunciator (EA) may or may not be connected because it is an optional device. If the EA is not connected, a display message of “(EA not connected)” is shown. If the EA is connected, display messages are shown; see Table 4 (Note that 1 means ON and 0 means OFF). When accessing Expanded Annunciator messages, follow the same operations as used with the Selectable messages.

Table 4. Expanded Annunciator.

Selectable Message[a] (Second Line)	Display Value (Second Line)	First Line Message
Expanded Annunciator↔		
↕Expanded Annunciator (EA not connected)<		↓EA
↕Current Status (CS:)[a]	EA Message<	↓EA
↕Valve Closure (Valve Close)	T5 = 1 or 0<	↓EA
↕Burner Switch (Burner Sw.)	T5 = 1 or 0<	↓EA
↕Operating Control (OperControl)	T6 = 1 or 0<	↓EA

↕EA Fault Code	nnn<	↓EA
↕Software Revision (SW Rev.)	nnnn<	↓EA

[a] See Table 8 for optional messages.

TROUBLESHOOTING

After the KDM is installed, return the 7800 SERIES to normal operation, restore power and run the system through at least one complete automatic cycle. For complete Troubleshooting and System Checkout information, see form 65-0229.

7800 SERIES System Diagnostics

Troubleshooting control system equipment failures is made easier with the 7800 SERIES self-diagnostics and first-out annunciation. The S7800 provides visual annunciation by displaying a fault code and fault or hold message on the display.

Self-diagnostics of the 7800 SERIES enables it to detect and annunciate both external and internal system problems. Internal faults and external faults such as interlock failures, flame failures and false flame signals are annunciated by the KDM via the 7800 SERIES Relay Module.

The KDM displays a sequence status message indicating STANDBY, PREPURGE, PRE-IGNITION, SAFETY 1, PILOT IGN, PILOT STAB., MAIN IGN, RUN or POSTPURGE, as appropriate. The selectable messages also provide visual indication of current status and historical status of the equipment, such as: Flame Signal, Total Cycles, Total Hours, Fault History, Diagnostic Information and Expanded Annunciator terminal status (if used). With this information, most problems can be diagnosed without extensive trial-and-error testing.

Table 21 provides the sequence and status hold messages.

Table 5. Keyboard Display Module Sequence and Status Hold Messages .

Sequence	Status
INITIATE mm:ss	The Keyboard Display Module (KDM) indicates the burner status, INITIATE, a stabilization period for the relay module to check for any fluctuations in ac line voltage inputs or control inputs on power up or during normal operation. The timing of the INITIATE period is either two seconds or ten seconds, depending on the model, before entering STANDBY.
If the relay module is in an INITIATE HOLD status, the following conditions could exist:	
INITIATE HOLD: (AC Frequency/Noise)	The KDM indicates the burner status and that it is waiting for excess line noise to clear up, which prevents sufficient reading of the line voltage inputs. The burner sequence does not advance into STANDBY until the excess line noise ceases or a line frequency error occurs; this is caused by using a 60 Hz device on a 50 Hz line, or vice versa on devices with a date code earlier than 9804, is corrected.
INITIATE HOLD: (AC Line Dropout)	The KDM indicates the burner status and that ac line power has momentarily dropped out. The burner sequence does not advance into STANDBY until the ac line voltage has stabilized throughout the INITIATE sequence.
INITIATE HOLD: (AC Frequency)	The KDM indicates the burner status and that line frequency is faster than the expected value. The burner sequence does not advance into STANDBY until the line frequency returns to the proper value; this is perhaps caused by using a 60 Hz device on a 50 Hz line for devices with a date code earlier than 9804.
INITIATE HOLD: (Low Line Voltage)	The KDM indicates the burner status and that low line voltage (10% lower than rated voltage) has occurred. The burner sequence does not advance into STANDBY until the line voltage is at a sufficient level for proper operating parameters.
STANDBY	The KDM indicates the burner status, STANDBY. The burner can be placed in STANDBY by opening the burner switch or if the operating controller indicates its setpoint is satisfied. If a demand is present for burner operation, the burner sequence does not advance from STANDBY to PURGE until the recycle limits close. If an Expanded Annunciator is connected, the display messages are enhanced.
If the relay module is in a STANDBY HOLD status, the following conditions could exist:	
STANDBY HOLD: F/G (Flame Detected)	The KDM indicates the burner status and that a flame is detected. A demand is present for burner operation. The sequence does not advance to PREPURGE until the flame signal clears. If the flame signal does not clear within 40 seconds, the relay module locks out.
STANDBY HOLD: T20 (Pre-Ignition Interlock)	The KDM indicates the burner status and that the Pre-Ignition Interlock is not closed. A demand is present for burner operation, but the burner sequence does not advance to PREPURGE until the Pre-Ignition Interlock proves closed. If this time exceeds a 30 second hold, the relay module locks out.
STANDBY HOLD: T7 (Lockout Interlock)	The KDM indicates the burner status and that the Lockout Interlock is closed. A demand is present for burner operation, but the burner sequence does not advance to PREPURGE until the Lockout Interlock proves open. If this time exceeds the 120 second hold, the relay module locks out.
STANDBY HOLD: T7 (Running Interlock) EC/RM7850	The KDM indicates the burner status and that the Running Interlock is closed. A demand is present for burner operation, but the burner sequence does not advance to PREPURGE until the Running Interlock proves open. If this time exceeds the 120 second hold, the relay module locks out.
PURGE	The KDM indicates the burner status, PURGE, which is the period of time the blower motor is running before the Ignition period. The timing of the PURGE period is selectable.
If the relay module is in a PURGE HOLD status, the following conditions could exist:	
PURGE HOLD: T19 (High Fire Switch)	The KDM indicates the burner status and that the High Fire Switch is not closed. The firing rate motor is driving to its PURGE rate position. If this time exceeds four minutes and fifteen seconds, the relay module locks out.
PURGE DELAY: T19 (High Fire Switch Jumpered)	The KDM indicates the burner status and that the High Fire Switch is jumpered. The High Fire Switch is bypassed, welded or otherwise prematurely closed. The system automatically adds 30 seconds to allow the firing rate motor additional drive time to reach or near the open damper position before starting the PURGE sequence.
PURGE HOLD: TEST (Run/Test Switch)	The KDM indicates the burner status and that the Run/Test Switch is in the TEST position. The sequence does not continue until the Run/Test Switch is placed in the RUN position.
PURGE HOLD: T18 (Low Fire Switch Jumpered)	The KDM indicates the burner status and that the Low Fire Switch is jumpered. The Low Fire Switch is bypassed, welded or otherwise prematurely closed. The system automatically adds 30 seconds to allow the firing rate motor additional drive time to reach or near the closed damper position before starting the ignition sequence.
PURGE HOLD: F/G (Flame Detected)	The KDM indicates the burner status and that a flame is detected. The burner sequence does not advance through PREPURGE because a flame is detected as being present. The sequence holds waiting for the flame signal to clear. If the time exceeds 30 seconds, the relay module locks out.

Table 5. Keyboard Display Module Sequence and Status Hold Messages (Continued).

Sequence	Status
PURGE HOLD: T18 (Low Fire Switch)	The KDM indicates the burner status and that the Low Fire Switch is not closed. The firing rate motor is driving to its Low Fire position in preparation for Ignition Trials. If this time exceeds four minutes and fifteen seconds, the relay module locks out.
PURGE HOLD: T7 (Running Interlock)	The KDM indicates the burner status and that the Running Interlock is not closed. The sequence does not advance to ignition until the Running Interlock proves closed. If this time exceeds 30 seconds, the relay module locks out.
PILOT IGN mm:ss	The KDM indicates the burner status, PILOT IGN, and the timing of the PILOT IGN trial begins, in seconds. During this period, the relay module permits the pilot valve to open and the pilot flame to establish.
If the relay module is in a PILOT HOLD status, the following conditions could exist:	
PILOT HOLD: TEST (Run/Test Switch)	The KDM indicates the burner status, PILOT IGN, and that the Run/Test Switch is in the TEST position. The sequence does not continue until the Run/Test Switch is placed in the RUN position.
MAIN IGN mm:ss	The KDM indicates the burner status, MAIN IGN, and the timing of the MAIN IGN trial begins, in seconds. During this period, the relay module permits the main valve to open and the main flame to establish.
RUN	The KDM indicates the burner status, RUN, which is the period of time after the Ignition Trials and before the operating controller setpoint is reached. During this time, the burner is firing under control of the firing rate control.
If the relay module is in a RUN HOLD status, the following condition could exist:	
RUN LOWFIRE: TEST (Run/Test Switch)	The KDM indicates the burner status and that the Run/Test Switch is in the TEST position. Normal modulation or operation does not continue until the Run/Test Switch is placed in the RUN position.
POSTPURGE mm:ss	The KDM indicates the burner status, POSTPURGE, which is the period of time after the RUN period when the blower motor continues to run. The timing of the POSTPURGE period is fifteen seconds.
Waiting for connection...	The KDM has power but is waiting to receive a signal from the relay module to continue operation.
RESET/ALARM TEST	The KDM indicates the burner status, RESET/ALARM TEST. This condition indicates that the reset button is pressed. If it is held for more than four seconds, the alarm output is energized. The alarm output is de-energized when the reset button is released.
Additional Sequence Status Information When An Expanded Annunciator is Connected to the Relay Module:	
BURNER OFF: T6 (Burner Switch)	The KDM indicates the Burner Switch is not closed. The burner sequence does not advance to PREPURGE until the Burner Switch closes.
STANDBY	The KDM indicates the burner status, STANDBY, and that the Operating Control is not closed. The burner sequence does not advance to PREPURGE until the Operating Control closes.
STANDBY HOLD: T6 (EA Hold Message)	The KDM indicates the burner status, STANDBY, and that a limit is not closed. The burner sequence does not advance to PREPURGE until one or all limits close downstream from the Operating Control.
STANDBY HOLD: T6 (Circuit Fault)	The KDM indicates the burner status, STANDBY, and that the control input is not closed. The burner sequence does not advance to PREPURGE until the control input closes.

The S7800 provides diagnostic information to aid the service mechanic in obtaining information when troubleshooting the system. See Table 6 for information on accessing historical and diagnostic selectable messages. Information available in the Diagnostic Information includes Device Type, Device Suffix, Software Revision, Manufacturing Code, Flame Amplifier Type, Flame Failure Response Time (FFRT), Selectable Jumper Configuration Status, Run/Test Switch Status and Terminal Status.

Historical Information Index

The S7800 displays historical information for the six most recent lockouts. Each of the six lockout records retains the cycle when the fault occurred, a fault code, a fault message, and burner status when the fault occurred. See Table 6. The Fault History is NOT available if the Service Call Feature is active.

Table 6. Accessing Historical and Diagnostic Selectable Messages.

Step	Operation	Press	Display	Comments
1.	Press ↑↓ keys to access Diagnostic Information.	↑↓	STANDBY Diagnostic Info>	Use the Down/Up SCROLL keys to access the selectable message. The second line will display Diagnostic Information.
2.	Press ◄ ► key to Access Diagnostic Information.	◄ ►	STANDBY Diagnostic Info>	Use the Change Level key to access the Diagnostic Information.
3.	Continue display of Diagnostic Information.	↑↓	STANDBY ↙ DI Device RM7800<	Push the SCROLL key to scroll to the next Diagnostic Message.
4.	Continue through remaining Diagnostic Information display following step 3 as required.	—	—	—
5.	Press the ◄ ► key to return to the first level of Diagnostic Information data prompt or to other selectable messages.	◄ ►	STANDBY Diagnostic Info>	Another display can be selected or discontinue accessing Diagnostic Information review.

SERVICE NOTE: If the Keyboard Display Module screen is scrambled, remove and reinstall the Keyboard Display Module and reset the 7800 SERIES Relay Module.

SERVICE NOTE: Reset the 7800 SERIES Relay Module by pressing the reset push button on the relay module or pressing a remote reset push button wired through the Keyboard Display Module, Data ControlBus™ Module or Remote Reset Module. A power-up reset will cause an electrical reset of the 7800 SERIES Relay Module but will not reset a lockout condition.

Lockout Messages

When the 7800 SERIES is locked out, it displays a repeating cycle of messages unless the Call Service Feature is Active. Then the Fault message is displayed followed by the Customer Service message. The Fault History is NOT available if the Call Service is Active. See Table 7. There are four states in the cycle:

1. State 1 (Fig. 16). A first state message display lasts six seconds. First line displays the word LOCKOUT followed by the fault code number and possibly a lower case letter if an Expanded Annunciator is connected. The letter corresponds to the first-out code supplied by the Expanded Annunciator. The lockout reason corresponding to the fault code number is displayed on the second line, highlighted by asterisks on each side.

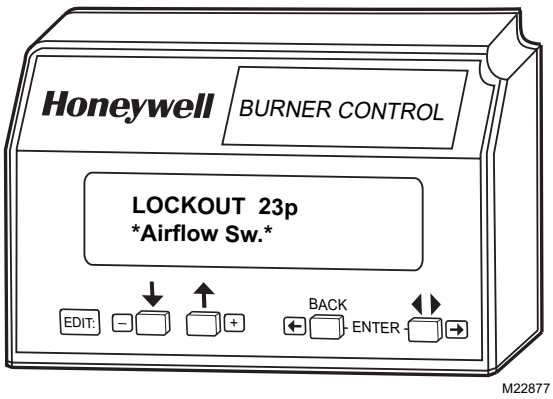

Fig. 16. Lockout message, State 1.

2. State 2 (Fig. 17). Display of the second state message lasts two seconds.

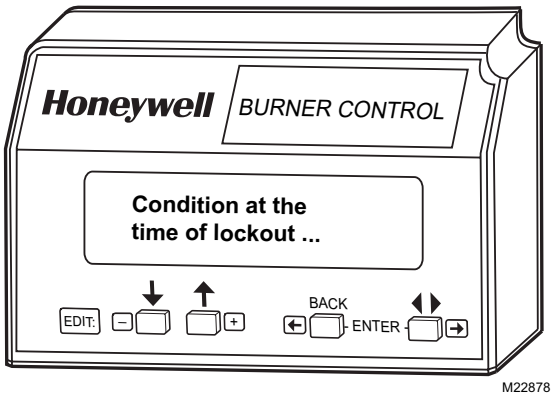

Fig. 17. Lockout message, State 2.

3. State 3 (Fig. 18). Display of the third state message lasts three seconds. It is a replica of the burner status as it existed at the time of the lockout. The second line is blank if the burner status at the time of lockout did not include a preemptive message (in parentheses) for the second line.

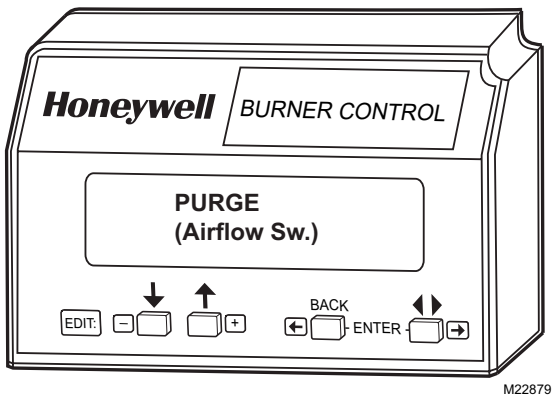

Fig. 18. Lockout message, State 3.

4. State 4: In the fourth state, both lines are blanked for one-half second, then the display sequences to the first state.

NOTE: For further explanation of Lockout Messages, Troubleshooting and Checkout, refer to form 65-0229.

Table 7. Hold and Fault Message Summary.

Fault Code	System Failure	Recommended Troubleshooting
Fault 1 *No Purge Card*	No card is plugged into the purge card slot.	**1.** Make sure the purge card is seated properly. **2.** Inspect the purge card and connector on the relay module for damage or contaminants. **3.** Reset and sequence the relay module. **4.** If the fault code reappears, replace the purge card. **5.** Reset and sequence the relay module. **6.** If the fault persists, replace the relay module.
Fault 2 *AC Frequen/Noise	Excess noise or device running on slow ac.	**1.** Check the relay module and display module connections. **2.** Reset and sequence the relay module. **3.** Check the relay module power supply and make sure that both frequency and voltage meed the specifications. **4.** Check the backup power supply, as appropriate.
Fault 3 *AC Line Dropout	Ac line dropout detected.	
Fault 4 *AC Frequency*	Device running on fast ac.	
Fault 5 *Low Line Voltage*	Low ac line detected.	
Fault 6 *Purge Card Error*	Purge card timing changed since card was initially read.	**1.** Make sure the purge card is seated properly. **2.** Inspect the purge card and connector on the relay module for damage or contaminants. **3.** Reset and sequence the relay module. **4.** If the fault code reappears, replace the purge card. **5.** Reset and sequence the relay module. **6.** If the fault persists, replace the relay module.
Fault 7 *Flame Amplifier*	Flame sensed when flame not present.	**1.** Check wiring and correct any errors. Make sure that the flame sensor wires are in separate conduits. Check for noise coupling into the flame detector leadwires. **2.** Make sure that flame detector and flame amplifier are compatible. **3.** Remove the flame amplifier and inspect connections. Reset the flame amplifier. **4.** Reset and sequence the relay module. **5.** If the code reappears, replace the amplifier. **6.** If the fault persists, replace the flame detector. **7.** If the fault persists, replace the relay module.
Fault 8 *Flame Amp/Shutr*	Flame sensed when no signal expected during shutter-check or Ampli-Check™ versions.	
Fault 9 *Flame Detected*	Flame sensed when no flame is expected during STANDBY.	**1.** Check that flame is not present in the combustion chamber; correct any errors. **2.** Check wiring and correct any errors. Make sure that flame sensor wires are in separate conduits. Check for noise coupling into flame detector leadwires. **3.** Remove the flame amplifier and inspect its connections. Reset the amplifier. **4.** Reset and sequence the relay module. **5.** If the code reappears, replace the amplifier and/or the flame detector. **6.** If the fault persists, replace the flame detector. **7.** If the fault persists, replace the relay module.
Fault 10 *Pre-Ignition ILK*	Pre-Ignition Interlock fault during STANDBY	**1.** Check wiring and correct any errors. **2.** Check Pre-Ignition Interlock switches to assure proper functioning. **3.** Check fuel valve operation. **4.** Reset and sequence the relay module; monitor the Pre-Ignition Interlock status. **5.** If the code persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 11 *Running ILK On*	Running Interlock powered at improper sequence point.	**1.** Check wiring to make sure that interlocks are connected properly between terminals 6 and 7. Correct any errors. **2.** Reset and sequence the relay module. **3.** If the fault persists, measure the voltage between terminals 6 and L2(N) (ground), then terminals 7 and L2(N). If there is line supply voltage present at terminal 6 when the controller is off, the controller switch may be bad or jumpered. **4.** If steps 1 through 3 are correct and there is line supply voltage present at terminal 7 when the controller is closed and the fault persists, check for a welded or jumpered Running Interlock, Lockout Interlock, or Airflow Switch. Correct any errors. **5.** If steps 1 through 4 are correct and the fault persists, replace the relay module.
Fault 12 *Lockout ILK On*	Lockout Interlock powered at improper sequence point.	
Fault 13 *Airflow Sw. On*	Combustion airflow interlock fault during STANDBY.	
Fault 14 *High Fire Sw.*	High Fire Interlock Switch failure to close during PREPURGE.	**1.** Check wiring and correct any errors. **2.** Reset and sequence the relay module. **3.** Use either the manual motor potentiometer to drive the motor to the High Fire position or use the Run/Test Switch option, if available. Sequence to Prepurge drive to High Fire and place in the Test position. Adjust the High Fire Switch while in this state to make sure that it closes properly. **4.** Measure the voltage between terminal 19 and L2(N) while in the Prepurge drive to High Fire state. Line supply voltage should be present. If not, the switch adjustment is incorrect and/or the switch is defective and needs replacing. **5.** Reset and sequence the relay module. If the line supply voltage was present between the High Fire Switch and terminal 19, and the fault still persists, replace the relay module.
Fault 15 *Flame Detected*	Flame sensed when no flame is expected during STANDBY.	**1.** Check that the flame is not present in the combustion chamber; correct any errors. **2.** Make sure that the flame amplifier and flame detector are compatible. **3.** Check wiring and correct any errors. **4.** Remove the flame amplifier and inspect the connections. Reset the flame amplifier. **5.** Reset and sequence the relay module. **6.** If the code reappears, replace the amplifier and/or the flame detector. **7.** If the fault persists, replace the relay module.
Fault 16 *Flame-Out Timer*	No-flame detected during Pilot Flame Establishing Period.	**1.** Measure the flame signal. If one exists, make sure it meets specifications. Make any necessary burner adjustments using manufacturer instructions. **2.** Make sure that the flame amplifier and flame detector are compatible. **3.** If the code reappears, replace the amplifier and/or the flame detector. **4.** If the fault persists, replace the relay module.
Fault 17 *Main Flame Fail*	Main flame failure during RUN after flame is established an on for at least 10 seconds.	**1.** Inspect the main fuel valve(s) and connection(s). **2.** Make sure that the fuel pressure is high enough to supply fuel to the combustion chamber. **3.** Check the flame detector sighting for adequate flame signal throughout the burner firing rate.
Fault 18 *Flame Detected*	Flame sensed when the shutter is open and no flame is expected during PREPURGE.	**1.** Check that flame is not present in the combustion chamber. Correct any errors. **2.** Make sure that the flame amplifier and flame detector are compatible. **3.** Check the wiring and correct any errors. Make sure F and G wires are in individual conduits and protected from stray noise pickup. **4.** Remove the flame amplifier and inspect the connectors. Reset the flame amplifier. **5.** Reset and sequence the relay module. **6.** If the code reappears, replace the flame amplifier and/or the flame detector. **7.** If the fault persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 19 *Main Flame Ign.*	Flame was lost during MFEP or the first 10 seconds of the RUN state.	**1.** Inspect the main fuel valve(s) and connection(s). **2.** Make sure the fuel pressure is high enough to supply fuel to the combustion chamber. **3.** Make sure the flame detector is positioned to obtain the required flame signal strength; reset and recycle.
Fault 20 *Low Fire Sw. Off*	Low Fire Interlock switch failure to close during PREPURGE.	**1.** Check wiring and correct any errors. **2.** Reset and sequence the relay module. **3.** Use either the manual motor potentiometer to drive the motor to the Low Fire position or use the Run/Test Switch option, if available. Sequence to Prepurge drive to Low Fire and place in the Test Position. Adjust the Low Fire Switch to make sure it closed properly. **4.** Measure the voltage between terminal 18 and L2(N) while in the Prepurge drive to Low Fire state. Line supply voltage should be present. If not, the switch adjustment is incorrect and/or the switch is defective and needs replacing. **5.** Reset and sequence the relay module. If line supply voltage was present between the Low Fire Switch and terminal 18, and the fault still persists, replace the relay module.
Fault 21 *Running ILK*	Running Interlock fault during PREPURGE.	**1.** Check wiring and correct any errors. **2.** Inspect the fan; make sure there is no blockage of the air intake and that it is supplying air. **3.** Make sure the Interlock Switches are working properly and that all switch contacts are free of contaminants. **4.** Reset and sequence the relay module to PREPURGE (place the Run/Test Switch in the Test position, if available). Measure the voltage between terminals 7 and L2(N). Line voltage should be present. **5.** If steps 1 through 4 are correct and the fault persists, replace the relay module.
Fault 22 *Lockout ILK*	Lockout Interlock fault during PREPURGE.	
Fault 23 *Airflow Switch*	Combustion airflow interlock fault during PREPURGE.	
Fault 24 *Call Service*	The flame interlock (relay module) was on when it should be off.	**1.** Check for F leadwire routing. Make sure routing is in its conduit and isolated from noise-producing circuits.
Fault 25 *Call Service*	The flame interlock (relay module) was off when it should be on.	
Fault 26 *Man-Open Sw. Off*	The Manual Open Valve Switch was off when it should be on (Device specific).	**1.** Check wiring and correct any errors. **2.** Make sure that the Manual Open Valve Switch is fully open. **3.** Make sure that the Manual Open Valve Switch is functioning properly and that the switch contacts are free from contaminants. **4.** Reset and sequence the relay module. **5.** Make sure that the Manual Open Valve Switch provides an electrical path when closed. Verify that the relay module is receiving power at terminal 17. **6.** If steps 1 through 5 are correct and the fault persists, replace the relay module.
Fault 27 *Start Switch On*	Start Switch was on during PREPURGE (Device specific).	**1.** Start Switch held on too long. **2.** Check wiring; verify that Start Switch is correctly connected. **3.** Make sure that the Start Switch is functioning properly and that the switch contacts are free of contaminants. **4.** Reset and sequence the relay module to PREPURGE; set the Run/Test Switch to Test. Make sure there is no power at terminal 6 during PREPURGE. **5.** If steps 1 through 4 are correct and the fault persists, replace the relay module.
Fault 28 *Pilot Flame Fail*	Pilot flame failure.	**1.** Check pilot valve wiring and operation. Correct any errors. **2.** Check fuel supply. **3.** Check pilot pressure and repeat pilot turndown test. **4.** Check ignition transformer electrode, flame detector, flame detector sighting and flame amplifier. **5.** If steps 1 through 4 are correct and the fault persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 29 *Lockout ILK*	Lockout Interlock fault.	**1.** Check wiring and correct any errors. **2.** Inspect the fan; make sure that there is no blockage of the air intake and that it is supplying air. **3.** Make sure that the Lockout Interlock Switches are working properly and that all switch contacts are free from contaminants. **4.** Reset and sequence the relay module to PREPURGE (place the Run/Test Switch in the Test position, if available). Measure the voltage between terminals 7 and L2(N). Line voltage should be present. **5.** If steps 1 through 4 are correct and the fault persists, replace the relay module.
Fault 30 *Running ILK*	Running Interlock fault.	**1.** Inspect the Running Interlocks, including the Airflow Switch, and the connections. **2.** Make sure that the Running Interlocks, including the Airflow Switch, are functioning properly and that switch contacts are free from contaminants. **3.** Reset and sequence the relay module to PREPURGE. Set the Run/Test Switch, if available, to Test. Measure the voltage between terminal 7 and L2(N). Line voltage should be present. **4.** If steps 1 through 3 are correct and the fault persists, replace the relay module.
Fault 31 *Low Fire Sw. Off*	Low Fire Interlock Switch failure to close during RUN (Device specific).	**1.** Check wiring and correct any errors. **2.** Reset and sequence the relay module. **3.** Use either the manual motor position to drive the motor to the Low Fire position, or use the Run/Test Switch option, if available. Sequence to Run drive to Low Fire and place the switch in the Test position. Adjust the Low Fire Switch while in this state to make sure it is closing properly. **4.** While in Run, drive to Low Fire state, measure the voltage between terminal 18 and L2(N). Line voltage should be present. If not, the switch adjustment is incorrect and/or the switch is defective and needs replacement. **5.** Reset and sequence the relay module. If line voltage was present between the Low Fire Switch and terminal 18, and the fault persists, replace the relay module.
Fault 32 *Airflow Switch*	Combustion Airflow Interlock fault.	**1.** Check wiring and correct any errors. **2.** Inspect the fan; make sure there is no blockage of the air intake and it is supplying air. **3.** Make sure the Airflow Interlock Switches are working properly and all switch contacts are free from contaminants. **4.** Reset and sequence the relay module to PREPURGE. Place the Run/Test Switch in the Test position, if available. Measure the voltage between terminals 7 and L2(N). Line voltage should be present. **5.** If steps 1 through 4 are correct and the fault persists, replace the relay module.
Fault 33 *Pre-Ignition ILK*	Pre-Ignition Interlock fault.	**1.** Check wiring and correct any errors. **2.** Inspect the Pre-Ignition Interlock switches and make sure they function properly. **3.** Check fuel valve operation. Valve must close within five seconds. **4.** Reset and sequence the relay module. **5.** During STANDBY or PREPURGE, measure the voltage between terminal 20 and L2(N). Line voltage should be present. If not, the Pre-Ignition Interlock switches can be defective and need replacing. **6.** If the fault persists, replace the relay module.
Fault 34 *Control On*	CTL input was energized at the wrong time for the relay module. This fault implies a field wiring error.	**1.** Check wiring and correct any errors. **2.** Reset and sequence the relay module. **3.** If fault persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 35 *Call Service*	Safety relay was off when it should be on or the internal fuse has blown.	**1.** Reset and sequence the relay module. If fault repeats, replace relay module, but be sure to test for excessive loads on appropriate terminals described by fault code. **2.** If fault does not repeat on next cycle, check for electrical noise being coupled into the relay module through the loads on appropriate terminals described by the fault code. **3.** Possibly check for bouncing running on Lockout Interlock. **4.** If fault persists, replace the relay module.
Fault 36 *Call Service*	Main valve terminal was off when it should be on, or the internal fuse has blown.	
Fault 37 *Call Service*	Pilot (ignition) valve terminal was off when it should be on, or the internal fuse has blown.	
Fault 38 *Call Service*	Ignition terminal was off when it should be on, or the internal fuse has blown.	
Fault 39 *Call Service*	V2S valve terminal (usually terminal 21) was off when it should be on, or the internal fuse has blown.	
Fault 40 *Call Service*	Safety relay was on when it should be off.	
Fault 41 *Main Valve On*	Main valve terminal was on when it should be off.	**⚠ WARNING** **Explosion Hazard.** **Can cause severe injury, death or property damage.** 1. Remove system power, turn off fuel supply. 2. Check for wiring errors that could provide power to terminals described by the fault. Correct any errors. 3. Re-power system; reset and sequence the relay module. 4. If fault persists, replace the relay module. 5. When fault is corrected, turn on fuel supply.
Fault 42 *Pilot Valve On*	Pilot (ignition) valve terminal was on when it should be off.	
Fault 43 *Ignition On*	Ignition terminal was on when it should be off.	
Fault 44 *Pilot Valve 2 On*	V2S valve terminal, used as a pilot, is on when it should be off.	
Fault 45 *Low Fire Sw. Off*	Low Fire Interlock switch failure to close or stay closed.	**1.** 1. Check wiring and correct any errors. **2.** 2. Reset and sequence the relay module. **3.** 3. Use either the manual motor position to drive the motor to the Low Fire position, or use the Run/Test Switch option, if available. Sequence to Run, drive to Low Fire and place in the Test position. Adjust the Low Fire Switch while in this state to make sure it is closing properly. **4.** 4. While in Run, drive to Low Fire state, measure the voltage between terminal 18 and L2(N). Line voltage should be present. If not, the switch adjustment is incorrect and/or the switch is defective and needs replacement. **5.** 5. If steps 1 through 4 are correct and the fault still persists, replace the relay module.
Fault 46 *Flame Amp Type*	Device specific.	**1.** Remove power to the device. **2.** Reset the flame amplifier and reset and sequence the relay module.
Fault 47 *Jumpers Changed*	The configuration jumpers differ from the sample taken at startup.	**1.** Inspect the jumper connections. Make sure that clipped jumpers are completely removed. **2.** Reset and sequence the relay module. **3.** If fault persists, replace the relay module.
Fault 48 *Delayed MV On* (2nd Stage Valve)	V2S valve terminal, used as a delayed main valve, was on when it should be off.	**⚠ WARNING** **Explosion Hazard.** **Can cause severe injury, death or property damage.** 1. Remove system power, turn off fuel supply. 2. Check wiring; correct any errors. 3. Inspect the V2S Fuel Valve and its connections. Make sure the switch is working correctly and is not jumpered or welded. 4. Reset and sequence the relay module. 5. If fault persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 49 *Man-Open Sw. On*	The manual open switch was on when it should be off.	**⚠ WARNING** **Explosion Hazard.** **Can cause severe injury, death or property damage.** 1. Remove system power, turn off fuel supply. 2. Check wiring; correct any errors. 3. Inspect the Manual-Open Switch and its connections. Make sure the switch is working correctly and is not jumpered or welded. 4. Reset and sequence the relay module. 5. If fault persists, replace the relay module.
Fault 50 *Jumpers Wrong*	The sequence logic detected a combination of jumpers that is illegal for the sequence, e.g., if it is correct to clip jumper JR1 or Jumper JR2, but not both, this fault would be used when both are clipped (Device specific).	**1.** Inspect the jumpers and refer to the installation instructions for compatible jumper configurations. **2.** Make sure that clipped jumpers are completely removed. **3.** Reset and sequence the relay module. **4.** If fault persists, replace the relay module.
Fault 51 *Flame Too Strong*	Flame signal value is too high to be valid.	**1.** Make sure that flame detector and flame amplifier are compatible. **2.** Remove the flame amplifier and inspect the connections. Reset the flame amplifier. **3.** Reset and sequence the relay module. **4.** Check the flame detector sighting position, reset and cycle. **5.** Verify that no ignition noise is present in the F lead due to wire routing. **6.** Measure the flame strength. Verify it meets specifications. If not, refer the flame amplifier and/or flame detector checkout procedures. **7.** If the code reappears, replace the flame amplifier. **8.** If the code reappears, replace the flame detector. **9.** If the fault persists, replace the relay module.
Fault 52 *Call Service*	Pilot Valve 2 (terminal 21) was off when it should be on.	**1.** Inspect terminal 21 and connections. Make sure that the valve is operating properly. **2.** Reset and sequence the relay module. **3.** If the fault persists, replace the relay module.
Fault 53 *Lockout Switch*	Lockout Input fault (EC/RM7850 only).	**1.** Check wiring and correct any errors. **2.** Inspect the Lockout Switch to make sure it is working properly. **3.** Reset and sequence the relay module. During STANDBY or PREPURGE, measure the voltage between terminal 20 and L2(N). Supply voltage should be present. If not, the lockout switch is defective and needs replacing. **4.** If the fault persists, replace the relay module.
Fault 54 *Comb. Pressure*	Combustion pressure switch fault (Fulton pulse only).	**1.** Check wiring and correct any errors. **2.** Inspect the Combustion Pressure Switch to make sure it is working correctly. **3.** Reset and sequence the relay module. **4.** During STANDBY and PREPURGE, measure the voltage between terminal 20 and L2(N). Supply voltage should be present. If not, the Combustion Pressure Switch is defective and needs replacing. **5.** If the fault persists, replace the relay module.
Fault 55 *Purge Fan Sw. On*	Purge fan switch is on when it should be off (Fulton pulse only).	**1.** Check wiring and correct any errors. **2.** Inspect the Purge Fan Switch terminal 18 and its connections. Make sure the switch is working correctly and is not jumpered or welded. **3.** Reset and sequence the relay module. **4.** If the fault persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 56 *Block Intake*	Block intake fault (Fulton pulse only).	**1.** Check wiring and correct any errors. **2.** Inspect the Block Intake Switch and make sure it is working properly. **3.** Reset and sequence the relay module. **4.** During PREPURGE, measure the voltage between terminal 7 and L2(N). Supply voltage should be present. If not, the Block Intake Switch is defective and needs replacing. **5.** If the fault persists, replace the relay module.
Fault 57 *Purge Fan Sw. Off*	Purge Fan Switch is off when it should be on (Fulton pulse only).	**1.** Inspect the Prepurge Fan Switch terminal 18 and the connections. Make sure the fan is working properly. **2.** Reset and sequence the relay module. **3.** If the fault persists, replace the relay module.
Fault 58 - 60 *Call Service*	Unused faults.	—
Fault 61	MV1 Off (Terminal 9); should be ON.	**1.** Check wiring and correct any errors. **2.** Reset and sequence the control. **3.** If fault persists, replace relay module (Before installing the new relay module, verify current draw of terminal 9).
Fault 62	MV2 Off (Terminal 17); should be ON.	**1.** Check wiring and correct any errors. **2.** Reset and sequence the control. **3.** If fault persists, replace relay module (Before installing the new relay module, verify current draw of terminal 17).
Fault 63	MV1 ON (Terminal 9); should be OFF.	**1.** Check wiring and correct any errors. **2.** Reset and sequence the control. **3.** If fault persists, replace relay module (Before installing the new relay module, verify current draw of terminal 9).
Fault 64	MV2 ON (Terminal 17); should be OFF.	**1.** Check wiring and correct any errors. **2.** Reset and sequence the control. **3.** If fault persists, replace relay module (Before installing the new relay module, verify current draw of terminal 17).
Fault 65 *VPS Off*	Valve Proving Switch (Terminal 16) OFF; should be ON. (VPS High Test)	**1.** Check wiring and correct any errors. **2.** Check MV2 for leaking valve seat. **3.** Reset and sequence control.
Fault 66 *VPS On*	Valve Proving Switch (Terminal 16) ON; should be OFF. (VPS Low Test)	**1.** Check wiring and correct any errors. **2.** Check MV1 for leaking valve seat. **3.** Reset and sequence control.
Fault 67 *AC Phase*	L1 and L2 miswired/exchanged (EC/RM7850 only).	**1.** Check L1 and L2 for proper line phasing.
Fault 68 *Pre-Ignition ILK*	Pre-Ignition Interlock fault.	**1.** Check wiring and correct any errors. **2.** Inspect the Pre-Ignition Interlock switches and make sure they work properly. **3.** Check fuel valve operation. Valve must close within five seconds. **4.** Reset and sequence the relay module. **5.** During STANDBY or PREPURGE, measure the voltage between terminal 17 and L2(N). Supply voltage should be present. If not, the Pre-Ignition Interlock switches are defective and need replacing. **6.** If the fault persists, replace the relay module.
Faults 69 - 70 *Call Service*	Unused faults.	—
Fault 71 *Dynamic LFS*	Low Fire Switch closed, High Fire Switch must be open (EC/RM 7850 only).	**1.** Check firing rate position switches (usually in Modutrol® Motor) for proper operation. **2.** Check wiring and correct any errors. **3.** Reset and sequence the relay module. **4.** If the fault persists, replace the relay module.
Fault 71 *Limits Complete*	Limit Input (terminal 7) is off when it should be on (RM7888 only).	**1.** Check limits to make sure they are satisfied after resetting. **2.** Check electrical connections to terminal 7 of wiring subbase. **3.** Reset relay module. **4.** If the fault persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 72 *Dynamic HFS*	High Fire Switch closed; Low Fire Switch must be open (EC/RM7850 only).	**1.** Check firing rate position switches (usually in Modutrol® Motor) for proper operation. **2.** Check wiring and correct any errors. **3.** Reset and sequence the relay module. **4.** If the fault persists, replace the relay module.
Fault 72 *Spec.Func.2*	Special Function 2 Input (terminal 17) is off when it should be on (Device specific).	**1.** Check operation of Special Function 2 of PLC. **2.** Check electrical connection to terminal 17 of wiring subbase and confirm presence of supply power when Special Function 2 is activated. **3.** Reset relay module. **4.** If the fault persists, replace the relay module.
Fault 73 *Spec.Func.3*	Special Function 3 Input (terminal 19) is off when it should be on (Device specific).	**1.** Check operation of Special Function 3 of PLC. **2.** Check electrical connection to terminal 19 of wiring subbase and confirm presence of supply power when Special Function 2 is activated. **3.** Reset relay module. **4.** If the fault persists, replace the relay module.
Fault 75 *Flame Proven Feedback*	Flame Indication Feedback (terminal 21) either on when it should be off or off when it should be on (Device specific).	**1.** Remove wire to terminal 21 and reset relay module. **2.** If the fault persists, replace relay module. **3.** Reconnect wire to terminal 21. If the fault returns, verify wiring.
Faults 76 - 87 *Accessory Fault*	—	—
Fault 88 *Accessory Fault*	T17 powered without Valve Proving feature setup.	**1.** Follow Valve Proving Selection Setup in Appendix B on selected Relay Module. **2.** If No Valve Proving (NEVER) is required, connect controller (Demand) to terminal 6.
Fault 89 *Accessory Fault*	T6 and T17 powered at the same time.	**1.** Correct wiring error.
Fault 90 *Accessory Fault*	T7 opens on RM7890 with VPS Feature	**1.** Determine what interrupted terminal 7. **2.** Correct any wiring issues. **3.** Reset Relay Module.
Faults 91-93 *Accessory Fault	—	**1.** —
Faults 94 - 104 *Call Service*	—	—
Fault 105 *Call Service*	Relay Module self-test failure.	**1.** Reset and sequence the relay module. **2.** If the fault reappears, remove power from the relay module and reapply the power; reset and sequence the relay module. **3.** If the fault persists, replace the relay module.
Fault 106 *Call Service*	Relay Module self-test failure.	—
Fault 107 *Call Service*	Relay Module flame signal crosscheck failure.	—
Fault 108 *Call Service*	Lost E2 or device shipped unprogrammed.	**1.** Reset control; if fault persists, replace control. **2.** If device resets and operates, verify earth grounding practices.
Fault 109 *Call Service*	Negative cycle test failed, earth ground absent or line voltage phasing improper.	**1.** Make sure a good earth ground connection exists at the installation site and all earth ground connections are complete and correct. **2.** Make sure the relay module and all loads operate at the same line voltage phase. **3.** Reset and sequence the relay module. **4.** If the fault persists, replace the relay module.

Table 7. Hold and Fault Message Summary. (Continued)

Fault Code	System Failure	Recommended Troubleshooting
Fault 110 *Call Service*	The configuration jumpers differ from stored values.	**1.** Inspect the jumper connections. Make sure they match the original selection and clipped jumpers are completely removed. **2.** Reset and sequence the relay module. **3.** If the fault persists, replace the relay module. **4.** Configuration jumpers must be selected prior to 200 hours of operation. If configuration jumpers are changed after 200 hours of operation, lockout 110 occurs. Relay module *cannot* be reset and *must* be replaced.
Fault 111 *Call Service*	Relay Module configuration jumper test failure.	**1.** Inspect the jumper connections. Make sure they match the original selection and clipped jumpers are completely removed. **2.** Reset and sequence the relay module. **3.** If the fault persists, replace the relay module.
Fault 112 - 126 *Call Service*	Relay Module self-test failure.	**1.** Reset and sequence the relay module. **2.** If the fault persists, replace the relay module.
Fault 127 *Call Service*	Safety relay feedback circuit was in an improper state.	**1.** Reset and sequence the relay module. **2.** If the fault persists, replace the relay module.

Expanded Annunciator Messages

If an Expanded Annunciator is wired to the limit control and interlock control strings, and connected to the 7800 SERIES Relay Module, additional hold messages, fault messages or code numbers enhance the original hold messages, fault messages or code numbers. See the Expanded Annunciator specification, form 65-0101, for detailed information. The message demonstrates which device opened first in a monitored string of limits or interlocks.

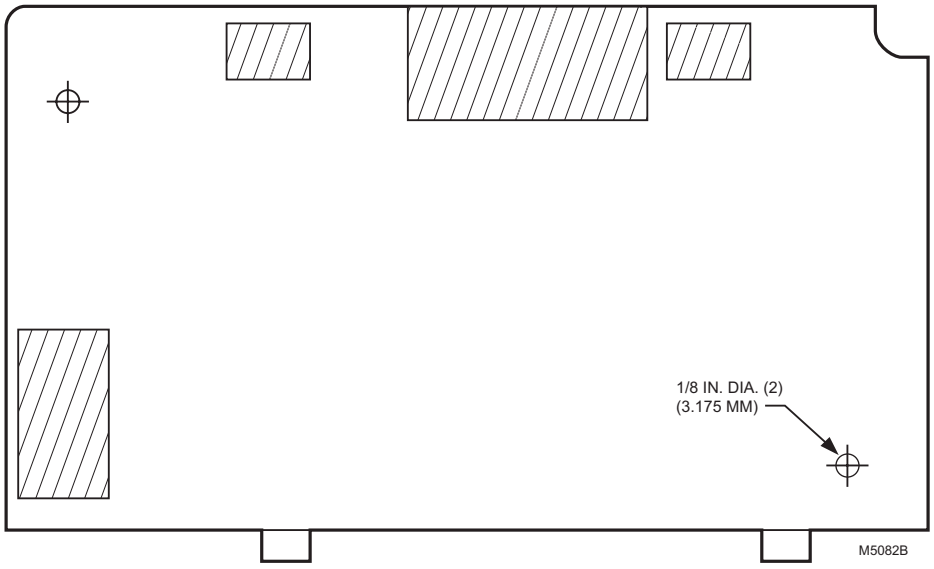

Fig. 19. KDM flush mounting outline.

APPENDIX A

Display Setup

The S7800A1142 Keyboard Display Module (KDM) requires a password to enter the Display Setup Menu.

The Display Setup Menu offers the following functions:

- Clone—Allows the current display setup to be copied entirely to another display (Series 3 or greater)—page 25.
- MB Address---Enables the ModBus Feature and Location. The 7800 SERIES device is located on the ModBus highway. It also provides a means of system verification that ModBus is active and that this module is being addressed—page 26.
- MB Baud---Sets the data Transmit/Receive rate. The S7800 is operating on ModBus—page 27.
- Clear All—Resets the Display settings back to the factory settings—page 27.
- Password—Change current default password of 000 to a unique one the customer has selected—page 27.
- CEA Edit—Configurable Expanded Annunciator allows editing of messages 44 to 64 with a text message up to 12 characters in length. See Table 9 for available characters—page 37.
- CEA Assign—Allows assigning a message to a given Expanded Annunciator terminal, so when it shows up on the display the description will match the specific system interlocks connected to that Expanded Annunciator terminal. See Table 8 for current message text list (messages 4 through 22), messages 23 through 44 contain other commonly used messages that could be chosen or assigned. Messages 45 through 64 are editable text strings edited through CEA Edit—page 28.
- CS On/Off—Allows the Customer Service message to be displayed or the lockout message to be displayed—page 31.
- CS Test—Allows the Customer Service message to be viewed for accuracy. This will display just once—page 31.
- CS Edit—Allows for personalizing a Customer Service message. Three screens of messages are available. Each screen has two lines with 20 characters available. See Table 9 for available character text—page 37.

Display Setup—CLONE

CLONE allows copying your entire Custom Display to additional displays, Series 4 or higher.

Before you begin, you will want to build a cloning jig.

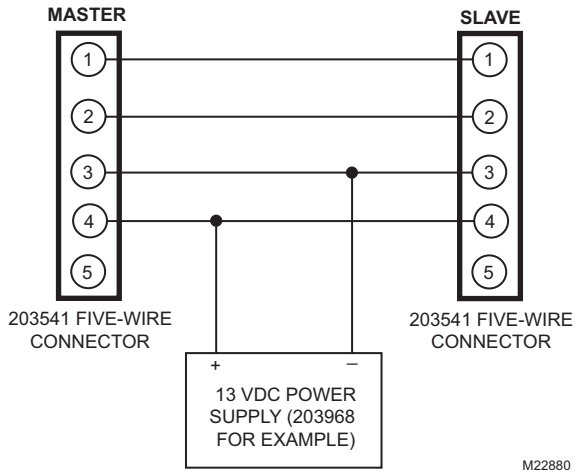

Fig. 20. Cloning jig.

To access the CLONE menu:

Press the left three buttons of the KDM for one second, then release.

DISPLAY Setup will appear. If you have a personal password, enter it to enter Setup.

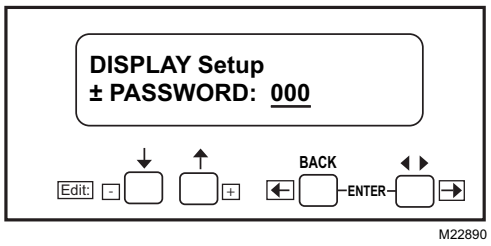

Fig. 21. Display Setup screen.

Press ENTER by pressing the two ENTER buttons at the same time.

Fig. 22. Select/Exit screen.

Choose Select.

Fig. 23. Display Setup/CLONE screen.

Press ENTER by pressing the two ENTER buttons at the same time. The Select/Exit Screen (see Fig. 22) will appear. Choose Select.

Fig. 24. Clone Master screen.

The Slave display will change from Fig. 25 to many On/Off sweeps with periods of bright characters.

Fig. 25. Waiting for Connection screen.

When complete, the Slave will still be going on and off, but the Cloning Complete screen can be read (Fig. 26). Replace this Slave with additional displays that need to be cloned.

Fig. 26. Cloning Complete screen.

On the Master Display, Press ENTER, using the two ENTER buttons at the same time.

Fig. 27. Exit screen.

Choose Exit and the Master will go back to the normal menu. You will notice that the Slave being cloned will also stop flashing.

Entering the cloned device and checking items like CS Test will confirm a successful clone.

Display Setup—MB Address

Fig. 28. Select: M B A D D R E S S, then ENTER.

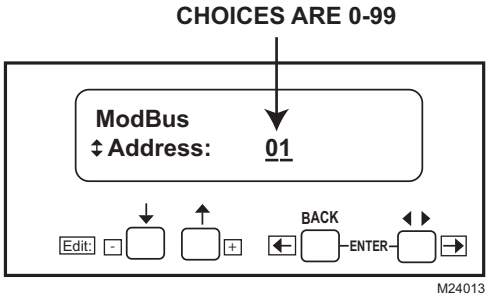

Fig. 29. Up/Down arrows increase or decrease number.

00 is the default, meaning ModBus is disabled.

01-99 are available addresses. Use terminal 1 and 2 on the 203541 connector for data + and data - connections.

Use ↑ and ↓ to select address. Press ENTER.

The left box blinking means ModBus activity is occurring. The right box blinking means this address is receiving activity (see Fig. 31). 00 is the default, meaning ModBus is disabled. 01-99 are available addresses. Use terminal 1 and 2 on the 203541 connector for data+ and data- connections (see Fig. 8).

With default address 00 terminals 1,2, 3 of the 203541 connector are available for the S7830 Expanded Annunciator or additional keyboard displays. With the addresses 01-99 enabled, ModBus is active and the S7830 Expanded Annunciator or additional displays will NOT work.

If the Expanded Annunciator or additional displays are required, then order the S7810M1003 ModBus card to support the ModBus Function.

Fig. 30. Press ENTER and display goes back to the following screen:

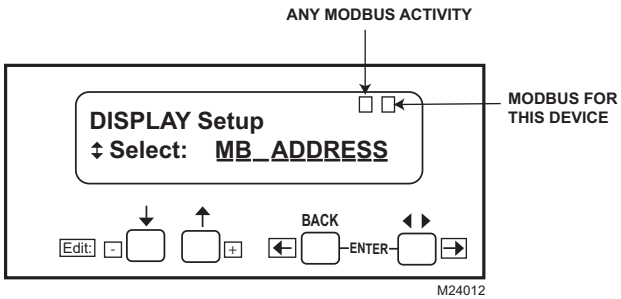

Fig. 31. ModBus activity as viewed on Setup screen.

Display Setup - MB Baud

```
DISPLAY Setup
↕ Select: MB_BAUD
```

Fig. 32. MB Baud entered on Select screen.

Display Setup MB Baud by pressing Enter. Scroll to MB BAUD screen. Select: M B B A U D.

```
↓ Select
  ↑ Exit
```

Fig. 33. Select/Exit screen.

Press ↓ to select.

```
ModBus
↕ BaudRate: _9600
```

Fig. 34. ModBus Baud rate selection setup.

Use the ↑ and ↓ keys to change rates (choices are 9600, 19,200, and 38,400).

```
↓ – Save Changes
    ↑ – Exit no Save
```

Fig. 35. Save Changes/Exit No Save screen will display again.

Press ENTER at the Save Changes/Exit No Save screen.

The display will go back to the DISPLAY Setup/Select CLONE screen:

```
DISPLAY Setup
↕ Select: CLONE
```

Fig. 36. DISPLAY Setup/Select CLONE Screen.

Display Setup—Clear All

Clear All resets the display setting back to the factory settings.

To access the Display Setup Menu:

Press the left three buttons of the KDM for one second, then release. DISPLAY Setup will appear:

```
DISPLAY Setup
± PASSWORD: 000
```

Fig. 37. DISPLAY Setup screen.

Enter your password if it has been changed from the Default Password.

Press ENTER using the two ENTER buttons at the same time. The Select/Exit screen (see Fig. 33) will appear. Choose Select.

```
DISPLAY Setup
± Select: CLONE
```

Fig. 38. DISPLAY Setup/Select CLONE screen.

Press the down arrow to scroll to CLEAR ALL.

Press ENTER, using the two ENTER buttons at the same time to select. The Select/Exit screen (see Fig. 33) will appear. Choose Select.

```
Clear Configuration
Use ENTER to Confirm
```

Fig. 39. Clear Configuration screen.

Press ENTER using the two ENTER buttons at the same time.

```
↓ Clear ALL
  ↑ Exit
```

Fig. 40. Clear ALL screen.

Press the Down arrow Clear All.

All display settings are returned to the factory defaults.

Display will go back to the DISPLAY Setup/Select CLONE screen (see Fig. 38).

Display Setup—Password

The S78800A KDM, Series 4 or higher, requires a password to make changes to the display information, such as unique Call Service Message or Expanded Annunciator Message information, for example.

The display is programmed with a default password of 000 (three zeros) and can easily ben changed to any three numbers.

NOTE: Use caution when selecting and securing your new password, should access be required in the future.

Re-entering the Display Setup will show different numbers and your unique password will need to be entered to gain access.

To access the Change Password menu.

Press the left three buttons of the KDM for one second, then release.

The DISPLAY Setup screen (see Fig. 37) will appear. Press ENTER using the two ENTER buttons at the same time.

The Select/Exit Screen (see Fig. 33) will appear. Choose Select.

The DISPLAY Setup/Select CLONE screen (see Fig. 23) will appear. Use the down arrow to scroll through the menu choices until PASSWORD appears.

Fig. 41. DISPLAY Setup/Select PASSWORD screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 42. Change Password/New Password screen.

Use up/down arrows to change the numbers and left/right arrows to move the cursor.

Press ENTER using the two ENTER buttons at the same time.

Fig. 43. Save Changes/Exit no Save screen.

Use down arrow to save.

Fig. 44. New Password Is screen.

The following message will appear:

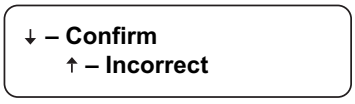

Fig. 45. Confirm/Incorrect screen.

Use arrow for your selection. Choosing Confirm will take you out of the DISPLAY Setup menu.

Press the left three buttons of the KDM for one second, then release.

Fig. 46. DISPLAY Setup/PASSWORD screen.

Use up/down arrows to change numbers and left/right arrows to move the cursor to enter your new password.

Press ENTER using the two ENTER buttons at the same time.

The Select/Exit Screen (see Fig. 33) will appear. Choose Select and you will be in the DISPLAY Setup menu. The DISPLAY Setup/Select PASSWORD screen (see Fig. 41) will appear. Press ENTER using the two ENTER buttons at the same time.

The Select/Exit Screen (see Fig. 33) will appear. Choose Exit and you will be out of the Setup menu again.

Display Setup—CEA EDIT

CEA EDIT allows customizing or editing of messages 44 to 64 with a text message of up to 12 characters in length. See Table 9 for available characters. This message will be connected to a specific terminal when CEA ASSIGN is programmed.

To access the CEA EDIT menu:

Press the left three buttons of the KDM for one second, then release.

DISPLAY Setup will appear.

NOTE: If you have a personal password, enter it now to enter Setup.

The DISPLAY Setup/PASSWORD screen (see Fig. 46) will appear. Press ENTER by pressing the two ENTER buttons at the same time.

The Select/Exit Screen (see Fig. 33) will appear. Choose Select.

The DISPLAY Setup/Select CLONE screen (see Fig. 38) will appear. Use the down arrow to scroll through the menu choices until EAEDIT appears.

Fig. 47. DISPLAY Setup/Select EAEDIT screen.

Press ENTER using the two ENTER buttons at the same time.

The Select/Exit Screen (see Fig. 33) will appear. Choose Select.

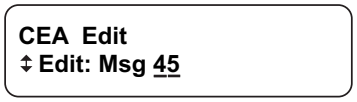

Fig. 48. CEA Edit/Edit Msg screen.

Use the up/down and left/right arrows to select Msg (message) number you wish to edit. Press ENTER using the two ENTER buttons at the same time to select.

Fig. 49. Select/Exit screen.

Choose Select.

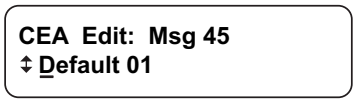

Fig. 50. CEA Edit Msg XX/Default XX screen.

Using the left/right arrow will move the cursor left and right. Up and down arrows will move you through the series of available script (see Table 9). Up to 12 characters can be used in your message.

NOTE: Moving through the characters script:

1. Pressing and holding an up/down arrow will fast forward to the end of the current script.
2. A space is located between the capital and lower case alphabet.
3. A space is added if you move the cursor right when it is under an empty character position.

Fig. 51. Save/Exit/Clear EOL screen.

Pressing the left arrow will clear text on the second line and return you to CEA Edit screen.

When you have finished entering your description, press the ENTER keys.

Fig. 52. Save/Exit/Clear EOL screen.

Press the Down arrow to Save. Suggest that you record the message number with your custom description.

Repeat the above steps for the remainder of the custom descriptions you wish to create.

When you have completed your final message, press ENTER.

Fig. 53. Save/Exit/Clear EOL screen.

Use up arrow to select Exit.

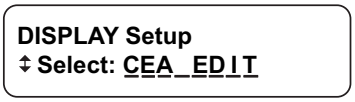

Fig. 54. DISPLAY Setup/Select CEA EDIT screen.

Press ENTER, then Exit if you are done or go to EA Assign to assigning your custom message to a specific Expanded Annunciator terminal.

Display Setup—CEA Assign

CEA Assign allows assigning a message to a given Expanded Annunciator terminal. When it shows up on the display, the description will match the specific system interlocks connected to that Expanded Annunciator terminal. See Table 8 for current message text list (messages 4 through 22), messages 23 through 44 contain other commonly used messages that could be chosen or assigned. Messages 45 through 64 are editable text strings edited through CEA Edit.

For example, the Expanded Annunciator terminal 7 is typically Aux Limit 1, so on a shutdown for this open limit, the display would show “Aux Limit 1.” CEA ASSIGN will allow you to change it to item 32 off the commonly used list, for example. When done, the Aux Limit 1 would display “Recirc Fan”.

S7800 does not support expanded annunciator if operating in ModBus mode.

To access the CEA ASSIGN menu:

Press the left three buttons of the KDM for one second, then release.

DISPLAY Setup will appear.

NOTE: If you have a personal password, enter it now to enter SETUP.

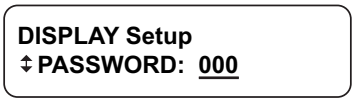

Fig. 55. DISPLAY Setup/PASSWORD screen.

Press ENTER by pressing the two ENTER buttons at the same time.

Fig. 56. Select/Exit screen.

Choose Select.

Fig. 57. DISPLAY Setup/Select CLONE screen.

Use the down arrow to scroll through the menu choices until EAASSIGN appears.

Fig. 58. DISPLAY Setup/Select CEA ASSIGN screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 59. Select/Exit screen.

Choose Select.

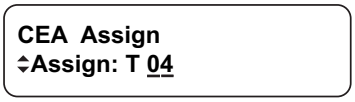

Fig. 60. CEA Assign screen.

Use the up/down and left/right arrows to select terminal number (7 for above example).

Press ENTER using the two ENTER buttons at the same time to select.

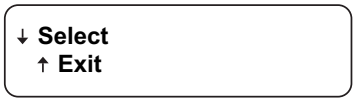

Fig. 61. Select/Exit screen.

Choose Select.

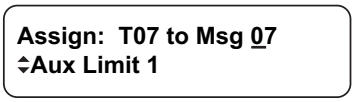

Fig. 62. Assign screen.

Use the left/right arrow to move the cursor left and right. Use the up/down arrows to change the message numbers (See Table 8 for pre-set messages or use your custom description from CEA EDIT. 32 is used from the above example.

The display will look like this:

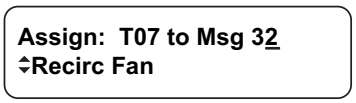

Fig. 63. Assign T07 to msg 32 screen.

Press the ENTER keys to accept.

Fig. 64. Save Changes/Exit no Save screen.

Press the Down arrow to save.

Fig. 65. CEA Assign/Assign screen.

Suggest that you record the terminal number and message with your custom description. Repeat the above steps to map the Expanded Annunciator terminals to your specific system. When complete with your final message, press ENTER.

Fig. 66. Save/Exit screen.

Use the up arrow to select Exit.

Fig. 67. DISPLAY Setup/Select EAASSIGN screen.

Press ENTER then choose Exit.

Display Setup—CS ON/OFF

CS ON/OFF allows the Call Service Message to be as follows:

- OFF—No call Service Message displayed, normal 7800 SERIES lockout message displayed.
- ON—Customized Call Service Message displayed on 7800 SERIES lockout. Goes away when 7800 SERIES reset button is pushed—just like a normal lockout.
- ON, Temporarily Off— Used for service technician to view normal 7800 SERIES Lockout messages along with diagnostic and history files. After 5 minutes, the display goes back to the Call Service On mode.

DISPLAY Setup will appear. Enter your password if you have changed the default password.

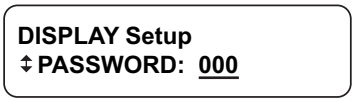

Fig. 68. DISPLAY Setup/PASSWORD screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 69. Select/Exit screen.

Choose Select.

Fig. 70. DISPLAY Setup/Select CLONE screen.

Use the down arrow to scroll through the menu choices until CS ON/OFF appears.

Fig. 71. DISPLAY Setup/Select: CS ON/OFF screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 72. Select/Exit screen.

Press Down arrow to Select.

Fig. 73. CS ON/OFF screen.

Use the up/down arrows to select (ON, OFF, or ON, Temporarily OFF).

Fig. 74. Save Changes/Exit no Save screen.

Use down arrow to Save.

Fig. 75. DISPLAY Setup/Select CLONE screen.

Use up or down arrows to move to another selection. If ENTER is pressed, the following screen appears:

Fig. 76. Select/Exit screen.

Choose up arrow to exit to normal display function.

Display Setup—CS TEST

CS TEST allows the Call Service message to be viewed. Accuracy and appearance can be viewed without putting the 7800 SERIES into lockout.

To access the CS TEST menu:

Press the left three buttons of the KDM for one second, then release.

DISPLAY Setup will appear. If you have a personal password, enter it to enter setup.

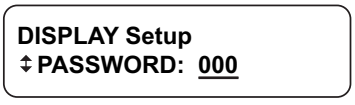

Fig. 77. DISPLAY Setup/PASSWORD screen.

Press ENTER by pressing the two ENTER buttons at the same time.

Fig. 78. Select/Exit screen.

Choose Select.

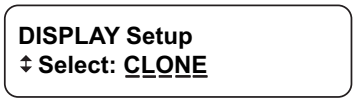

Fig. 79. DISPLAY Setup/Select CLONE screen.

Use the down arrow to scroll through menu choices until CS TEST appears.

Fig. 80. DISPLAY Setup/Select CS TEST screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 81. Select/Exit screen.

Choose Select.

The display will sequence once through the Call Service message you have entered during the CS Edit setup.

Below is the default message.

Press ENTER using the two ENTER buttons at the same time to select.

Fig. 82. Select/Exit screen.

Choose Select.

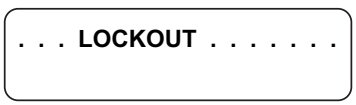

Fig. 83. LOCKOUT screen.

Displayed for two seconds.

Fig. 84. CALL SERVICE screen.

Fig. 85. Blank screen.

The blank screen is displayed for two seconds.

When done, the display will be:

Fig. 86. DISPLAY Setup/Select CS TEST screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 87. Select/Exit screen.

Choose Exit.

You will be taken completely out of the Setup menu.

Display Setup—CS EDIT

CS EDIT allows customizing or personalizing a Call Service message. Three screens of messages are available. Each screen has two lines of text with 20 characters available. See Table 9 for available characters. This message will be displayed with the 7800 SERIES is in a lockout condition in place of the normal Lockout Fault condition. Note that the Call Service feature must be turned ON using the CS ON/OFF selection.

To access the CS EDIT menu:

Press the left three buttons of the KDM for one second, then release.

DISPLAY Setup will appear. If you have a personal password, enter it to enter Setup.

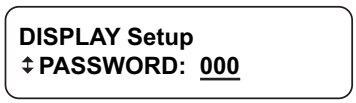

Fig. 88. DISPLAY Setup/PASSWORD screen.

Press ENTER by pressing the two ENTER buttons at the same time.

Fig. 89. Select/Exit screen.

Choose Select.

Fig. 90. DISPLAY Setup/Select CLONE screen.

Use the down arrow to scroll down through menu choices until CS EDIT appears.

Fig. 91. DISPLAY Setup/Select CS EDIT screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 92. Select/Exit screen.

Choose Select.

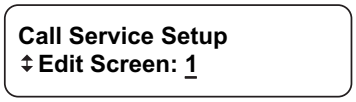

Fig. 93. Call Service Setup/Edit Screen 1 screen.

Press ENTER using the two ENTER buttons at the same time.

Fig. 94. Select/Exit screen.

Choose Select.

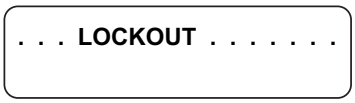

Fig. 95. LOCKOUT screen.

Using the left/right arrow will move the cursor left and right. Up and down arrows will move you through the series of available scripts (See Table 9). Up to 20 characters per line (you have two lines available) can be used in your message.

NOTE: Moving through the scripts:

1. Pressing and holding an up/down arrow will fast forward to the end of the current script.
2. A space is located between the capital and lower case alphabets.
3. A space is added if you move the cursor right when it is under an empty character position.

Pressing the ENTER keys will show:

Fig. 96. Save/Exit/Clear EOL screen.

Pressing the left arrow will clear text on the line you are on and return you to the CS Edit screen. When you have finished entering your description, press the ENTER keys.

Fig. 97. Save/Exit/Clear EOL screen.

Press the down arrow to Save.

Fig. 98. Call Service Setup screen.

Use the up arrow to go to screen 2 or 3. Repeat the above steps for custom messages you wish to create. When complete with your final message, press ENTER.

Fig. 99. Save/Exit/Clear EOL screen.

Use the up arrow to select Exit.

Fig. 100. DISPLAY Setup/Select CS EDIT screen.

use the up arrow to scroll to CS TEST item to view your message. Return back to CS EDIT to make any corrections. Use the up arrow to scroll to CS ON/OFF to turn on your customer Call Service message.

Press ENTER, then Exit if you are finished.

APPENDIX B

VALVE PROVING SYSTEM

The S7800A1142 display is required to set up this feature.

Valve Proving System feature provides a systematic way of testing the valve seat integrity to assure the valves are indeed in the closed state when the system is off line—in Standby.

At commissioning time, the Valve Proving System may be scheduled to occur at one of five different times: Never, Before, After, Both, and Split.

- Never—Device Default as received; in this case Valve Proving does not occur.
- Before—Valve Proving occurs prior to ignition trials.
- After—Valve Proving occurs after the Run state; before the internal Safety Relay dropout state.
- Both—Valve Proving occurs at both times Before and After noted above.
- Split—the high pressure test (MV2 seat test) is performed at the Before time and the low pressure test (MV1 seat test) is performed during the After.

The Valve Proving items programmed are:

1. Enable Valve Proving and, if so, when to perform it.
2. The time duration of the test is selected from a table where values and ranges are provided.

Valve Proving Function

Valve proving consists of monitoring the pressure in the space between two shutoff valves, MV1 (upstream) and MV2 (downstream). The valve proving function, identified by letters A through G, will operate as follows:

NOTE: The tolerance on all valve proving timing values is ±10%.

Below are steps performed during Valve Proving tests. This section is for background information and does not define the exact behavioral requirements.

A. The RM78XX requires the combustion airflow switch (terminal 7) to power the gas valves for testing. The airflow remains on throughout the Valve Proving Test. RM7890 will require power on terminal 7.

B. MV2 is commanded to be open while MV1 remains closed, to depressurize the space. After four seconds, MV2 is commanded closed again.

C. This is followed by a three-second delay during which the valve proving pressure switch (VPS) is ignored.

D. Thereafter, the VPS is monitored for the duration of the Valve Proving Test time, and, if it turns on, then a lockout occurs (because the gas pressure has increased due to a leaky upstream valve).

E. MV1 is commanded to be open while the MV2 remains closed, to pressurize the space. After four seconds, MV1 is commanded closed again.

F. This is followed by a three-second delay, during which the valve proving pressure switch (VPS) is ignored.

G. Thereafter, the VPS is monitored for the duration of the Valve Proving Test time, and, if it turns off, then a lockout occurs (because the gas pressure has decreased due to a leaky downstream valve).

Setup of Valve Proving Function

Prior to setup of the Valve Proving Function, follow the procedures in the appendix of the Relay Module to complete the worksheet and obtain the Valve Proving Test Time.

An S7800A1142 Keyboard Display Module (KDM) is required for this setup and the RM78XX must have the Valve Proving function. The device must be in Standby or Alarm to get the Setup screen.

1. Scroll down until “Setup” is displayed in the second line.

Fig. 101. STANDBy/Setup screen.

2. Enter the Setup subroutine by pressing the far right key on the display. Note that the second line now reads “BC Password”.

Fig. 102. Password screen.

3. Use the up/down arrows to enter the first number—7.
4. Use the far right key to shift over one space.
5. Use the up/down arrows to enter the second number 8.
6. Press Enter (far right two buttons).
7. To get to the next screen, press down arrow. “Getting Data” will be displayed, then the following screen.

Fig. 103. SETUP: Valve Prove screen.

NOTE: This screen sets up when to do the Valve Proving Test.

8. Use the up/down arrows to select from Never, Before, After, Both, or Split, then press ENTER.

NOTE: Use Never on initial startup so that System Checkout can be performed. Then come back to set final operation configuration followed by the VPS system checkout.

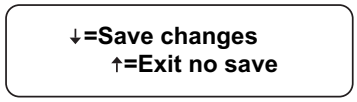

Fig. 104. Save Changes screen.

9. Use the down arrow to save changes. After pressing the down arrow, “Getting Data” is displayed.

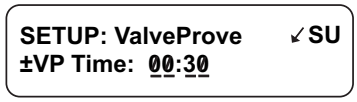

Fig. 105. Valve Prove time screen.

This screen sets up how long the RM78XX will conduct the Valve Proving Test for a given time. VP TIme: 00:00 is shown.

10. Enter the appropriate Valve Proving test time from the worksheet in the RM78XX Instruction Sheet.

Use the up arrow to increase time. Time increases:

a. 0 to 60 seconds in 1-second intervals.
b. 60 to 600 seconds in 10-second intervals.
c. 10 to 60 minutes in 1-minute intervals.

Press ENTER when correct time is displayed.

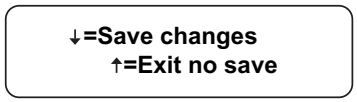

Fig. 106. Save Changes screen.

11. Use the down arrow to save changes. After pressing the down arrow, “Getting Data” is displayed.

12. Use down arrow to save changes.

“Getting Data” is displayed.

The following steps are to confirm your selections.

Fig. 107. Confirmation Acknowledgement screen.

13. Press ENTER to acknowledge.

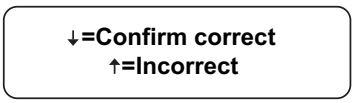

Fig. 108. Confirmation Correct screen.

14. Use the down arrow to confirm correct.

NOTE: Using the up arrow during this step will take you back to the beginning of the setup routine.

“Getting Data” will be displayed.

Fig. 109. Confirm screen.

15. Press Enter.

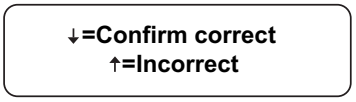

Fig. 110. Confirm Correct screen.

16. Use the down arrow to confirm correct.

17. Use the down arrow to confirm correct.

“Getting Data” will be displayed.

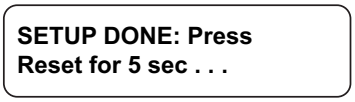

Fig. 111. Setup Done screen.

18. Go to the relay module and press and hold the RESET button for five seconds to program the Valve Proving setup into the relay module.

The Release Reset screen will appear on the KDM.

Fig. 112. Release Reset screen.

Changing the Valve Proving features is still possible. With the relay module in Start Switch, scroll to the Setup line and enter the password to change the settings.

Once the system is in operation, the settings of the Valve Proving can be viewed un Diagnostics, using your S7800 Keyboard Display Module (KDM).

APPENDIX C

Setup of Post Purge

NOTE: An S7800A1142, Keyboard Display Module (KDM), is required for the setup of the RM78XX Post Purge Timing.

When the RM78XX is installed and powered, “STANDBY” will be shown on the first line of the display (Fig. 114).

Fig. 113. Setup Needed screen.

1. Scroll down until “Setup” is displayed in the second line.
2. Enter the setup sub-routine by pressing the far right key on the display.

Fig. 114. Entering the setup sub-routine.

The second line reads “BC Password”.

3. Use the up/down arrows to enter the first number, 7.
4. Use the far right key to shift over one space.
5. Use the up/down arrows to enter the second number, 8.
6. Press Enter (left and right arrows simultaneously).
7. To select the next screen, press the down arrow key; “Getting Data” will be momentarily displayed, followed by the screen shown in Fig. 119.

IMPORTANT:

You will need to scroll through the Valve Proving Test Setup (see Appendix B) to get to this screen.

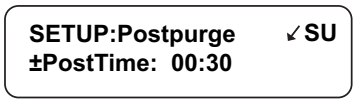

Fig. 115. Setting Post Purge time.

This screen allows for setting up the Postpurge timings. This will be the time that the Combustion Fan (terminal 5) will remain energized after the Stop Switch/Limit (terminal 6) is interrupted. This time will run concurrent with Valve Proving Test if After, Both, or Split option is selected.

Use the up arrow to increase the postpurge time.

Time increases:

0 to 60 seconds in 1 second intervals.

60 to 600 seconds in 10 second intervals.

10 to 60 minutes in 1 minute intervals.

8. Press Enter when the correct postpurge time is displayed.

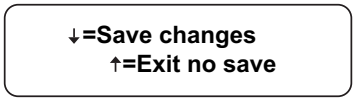

Fig. 116. Save Changes screen.

9. Use down arrow to save changes. “Getting Data” is displayed momentarily.

The following steps are used to confirm your selection.

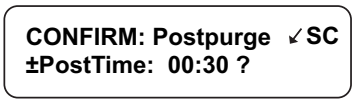

Fig. 117. Confirm Postpurge time.

1. Press Enter.

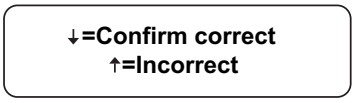

Fig. 118. Confirm correct/incorrect screen.

2. Press the down arrow to confirm the correct postpurge time. “Getting Data” will be displayed until the screen in Fig. 119 appears.

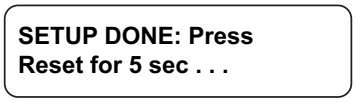

Fig. 119. Setup Done screen.

3. Go to the RM7897 and press and hold the reset button for five seconds to program the postpurge time into the relay module.

The Release Reset screen will appear on the KDM.

Fig. 120. Release Reset screen.

Changing the postpurge time feature is still possible. With the RM in Standby, scrolling to the Setup line and entering with the password allows the settings to be changed.

Once the system is in operation, the settings of the postpurge time can be viewed under Diagnostics, using your S7800 Keyboard Display Module.

APPENDIX E: MODBUS FUNCTION

See Appendix A pages 26 and 27 for Setup.

OPERATION

The S7800 ModBus™ Data Feature enables terminal 1, 2 to Data + and Data -. Table 17 provides register mapping. It identifies the mapping of the 7800 SERIES parameters to ModBus™ registers.

Function Codes

Supported function codes of Modbus Protocol Reference Guide (PI-MBUS-300 Rev. J) are 3, 4, 6, and 17. Function codes 3 and 4 are treated the same by the S7800. Two registers need to be read when the data format is a U32 value (4 bytes); if both registers are not read, then a data value of 0 (zero) is returned. U32 values are in little endian format. The maximum number of addresses that can be queried is 127 (0x7F) for each query message.

Tables 3 through 7 provide information on the function codes.

NOTE: All Query and Response cells below are 1 byte.

Table 10. Query Message Format for Function Codes 3 and 4.

Slave Address	Function Code	Starting Address High	Starting Address Low	Number of Addresses High	Number of Addresses Low	CRC	CRC
01	03	00	0A	00	01	A4	08

Table 11. Response Message Format for Function Codes 3 and 4.

Slave Address	Function Code	Byte Count	Data High	Data Low	CRC	CRC
01	03	02	00	22	38	5D

Table 12. Query Message Format for Function Code 6 (Broadcast is supported by using a slave address of 00).

Slave Address	Function Code	Starting Address High	Starting Address Low	Preset Data High	Preset Data Low	CRC	CRC
01	06	00	7F	00	04	B9	D1

Table 13. Response Message Format for Function Code 6 (There is no response if the query was broadcast.)

Slave Address	Function Code	Starting Address High	Starting Address Low	Preset Data High	Preset Data Low	CRC	CRC
01	06	00	7F	00	04	B9	D1

Table 14. Query Message Format for Function Code 17.

Slave Address	Function Code	CRC	CRC
03	11	C1	4C

NOTE: See Table 18 for function code 17 response format.

Table 15. Exception Response Message Format.

Slave Address	Function Code + 80h	Exception Code	CRC	CRC

Table 16. Exception Codes.

Exception Code	Definition	Description
01	Illegal Function	An illegal function as requested. Only 3, 4, 6 and 17 are supported.
02	Illegal Data Address	Too many bytes requested, address is out of range, register is read only, or the number of address requested is past the last register.
03	Illegal Data Value	The “Preset Data” from function code 6 is invalid/out of range.

Device Address and Baud Rate

Assign each device in the system a unique address by setting the MODBUS ADDRESS (see page 26). Only RTU communications with 1 Start Bit, 8 Data Bits, 1 Stop Bit and no parity is supported.

NOTE: Assign a device address number from 01 to 99. 00 is not an acceptable address number and will not work, except for the broadcast ability of function 6.

NOTE: In Tables 10, 15 and 18: Line 1 and Line 2 refer to the two lines of text on the S7800 Keyboard Display Module. In Tables 21, 23 and 24: The String Code column references Table 21, String Codes. In Table 22: The Burner Control State Bits column references Table 21, Burner Control State Bits..

Table 17. ModBus™ Register Assignments.

Address (hex)	Register (dec)	Parameter Name	Read/ Write	Format	Notes
0000	40001	Burner Control (BC) Fault Code	R	U16	See Table 23. Non-zero value = Lockout number.

Table 17. ModBus™ Register Assignments. (Continued)

Address (hex)	Register (dec)	Parameter Name	Read/ Write	Format	Notes
0067	40104	Valve Proving Mode	R	U16	0 = Valve Proving is not enabled 1 = Enabled before Run 2 = Enabled after Run 3 = Enabled before and after Run 4 = Enabled split half before and half after Run
0068	40105	Valve Proving option	R	U16	1 = Uncommissioned 2 = Commissioned
0069	40106	Valve Proving time	R	U16	Seconds
0066-007E	40103-40127	Unused			
007F	40128	BC Remote Command	R/W	U16	Only one bit in the LSByte must be set, with the exception of bit 15: Bit 0 =Revert to autonomous operation. Bit 1 = Don't fire, remain off. Bit 2 = Go to Hi Fire during Run. Bit 3 = Go to Lo Fire during Run. Bit 4 = Remote reset.[a] Bits 5-7 must be 0. Bits 8-14 are ignored. Bit 15: Copied to the control status register. The remote control status register can be used to verify operation of the command. Bits 1-3 must be refreshed at least every 120 seconds, but not more than once a second, for the burner control to remain in the commanded state.
01B7-01B8	40440-40441	Unused		U32	
01BA	40443	Device Data Ready		U16	Device data was properly received by S7800. Bit(s) Device 0 RM78XX 3 EC78XX 4-15 Unused
01BB	40444	S7800 Device Compatibility with Current Software Revision S7800 Software Revision Compatibility with Legacy Software Revisions.		U16	Device is compatible with the S7810M version Bit Device 0 RM78XX 3 EC78XX 4-7 Unused Used for indication of S7800 revision compatibility. Bit(s) Compatible with: 8 Series 2 9-15 Future

NOTE: "Device Data Ready" and "S7800 Compatibility" bits can be used to quickly check device availability and compatibility then read/write registers of only these devices.

Response Message Format for Function Code 17.

This format is device specific and is only available for the 7800 SERIES burner control. See Table 14.

Table 18. Response Message Format for function code 17 (11h), (26 bytes).

	Slave Address	Function Code	Byte Count	Slave ID[a]	Run Indicator Status[b]	Device Description[c]	N/A	CRC	CRC
Byte	0	1	2	3	4	5-15	16-23	24	25

[a] Slave ID: Always 0x78 when using RM78xx or EC78xx Relay Modules(1 byte) (byte 3).

[b] Run Indicator Status: Always FF=ON (one byte) (byte 4).

[c] Device Description: 16 Character ASCII OS number for the Burner Control (11 bytes) (bytes 5-15).

Burner Control Type Codes

The burner control type code indicates the exact model number of the burner control. See Table 19.

Table 19. Burner Control Type Codes.

7	Pre-Ignition	0000 0000 1000 0000
8	Valve Proving	0000 0001 0000 0000
13	Alarm	1010 0000 xxxx xxxx NOTE: Lockout bit is also set.
14	Hold	0100 0000 xxxx xxxx One other bit may be on.
15	Lockout	1010 0000 0000 0000 NOTE: Alarm bit is also set.

7800 SERIES Sequence State Codes

Sequence state codes are provided by the Burner Control. Each code is translated into two string codes for displaying an associated message in two lines. Each code is also translated into burner control state bits which may be used to generate and control system diagrams on an operator interface. The codes can also be retrieved from registers 40004, 40005, and 40013.

The Sequence State Codes shown in Table 21 are valid only if the Fault Code has a value of zero. If the Fault Code is non-zero, the sequence state field contains the sequence state code when the lockout occurred.

Table 21. 7800 SERIES Sequence State Codes and Associated register code values.

Register 40003	7800 SERIES Sequence State	String Code		Uses mm:ss	Burner Control State Bits

7800 SERIES String Codes

Table 23 contains a listing of all string codes provided by the S7800M. The associated string is not implemented in the S7800M; it is a string equivalent to that displayed on the S7800 Keyboard Display Module or similar device.

Table 22. 7800 SERIES String codes.

String Code	String
0	(blank)
1	1
2	1-1
3	1-2

7800 SERIES Fault Codes

Table 23 is a complete list of fault codes that may appear in the fault code register. The Fault String Code register will contain the corresponding String code identified in the table.

Table 23. 7800 SERIES Fault Codes.

Fault Code (Reg 40001)	Fault Message (NOTE: FAULT n: is not in the Fault and Strings Code)	Fault String Code (Table 22)
0	*Blank (no fault)*	0
1	FAULT 1: NO PURGE CARD	73

234	FAULT 22b: AUX LIMIT #2[EA]	18
235	FAULT 22a: AUX LIMIT #1[EA]	17
236	FAULT 21s: OTHER INTERLOCKS[EA]	74
237	FAULT 21r: AUX INTERLOCK #5[EA]	16
238	FAULT 21q: AUX INTERLOCK #4[EA]	15
239	FAULT 21p: AIRFLOW SWITCH[EA]	13
240	FAULT 21o: LOW GAS PRESSURE[EA]	59
241	FAULT 21n: HIGH GAS PRESSURE[EA]	41
242	FAULT 21m: ATOMIZING SW[EA]	14
243	FAULT 21k: LOW OIL TEMP[EA]	62
244	FAULT 21j: HIGH OIL TEMP[EA]	44
245	FAULT 21i: LOW OIL PRESSURE[EA]	61
246	FAULT 21h: HIGH OIL PRESSURE[EA]	43
247	FAULT 21g: BOTH FUELS SELECT[EA]	21

Table 23. 7800 SERIES Fault Codes. (Continued)

Fault Code (Reg 40001)	Fault Message (NOTE: FAULT n: is not in the Fault and Strings Code)	Fault String Code (Table 22)
248	FAULT 21f: FUEL SELECT OFF[EA]	38
249	FAULT 21e: AUX LIMIT #3[EA]	19
250	FAULT 21d: HIGH LIMIT[EA]	42
251	FAULT 21c: LWCO[EA]	63
252	FAULT 21b: AUX LIMIT #2[EA]	18
253	FAULT 21a: AUX LIMIT #1[EA]	17
254	FAULT 10z: OTHER PREIGN ILK[EA]	75
255	FAULT 10y: VALVE CLOSURE[EA]	109

7800 SERIES Burner Control Fault History Records

Table 24 describes the registers that are part of a fault history record. To determine the actual register address for a parameter within the record, add the register offset to the start address of the record.

Table 24. Fault History Record Format.

Offset	Parameter Name	Access	Format	Notes
0	Fault code	R	U16	See Table 23.
1	Fault String	R	U16	See Table 22.
2	Sequence State	R	U16	See Table 21.
3	First line message	R	U16	See Table 22.
4	Second line message	R	U16	See Table 22.
5	Sequence time	R	U16	Seconds.
6-7	Total cycles	R	U32	
8-9	Total hours	R	U32
